Welcome to the Quality Indicators Search Page!

Heart Attack

A heart attack (also called an AMI or acute myocardial infarction) occurs when blood flow to part of the heart muscle is blocked. These quality measures show some of the recommended treatments for a heart attack.

The data below represents discharges from April 2006 to March 2007, with the exception of 30-day mortality. 30-day mortality data are from discharges July 2005 to June 2006. (* indicates the data collection period is less than 1 year)
