

Hello,

I am writing as a citizen concerned about losses of medical freedoms. Specifically any proposal to take away religious exemptions from vaccines. As a parent I have made it my responsibility to research the science myself.

This is a medical ethics issue, and the ethics are clear: no one should be forced to undergo a medical treatment without informed consent and agreement to the treatment. Vaccination is a medical treatment with many, many risks including death. It is completely antithetical to all ethics in medicine to mandate that risk to citizens. Medicine must be practiced with a foundation of ethics and respect for patient autonomy.

Vaccines are not placebo safety tested, and the industry is free from any liability for their product. Despite this VAERS has paid out over 4 BILLION dollars in injury compensation. It is estimated that 1% of vaccine injuries are reported. This means that vaccine injuries are quite common indeed. Did you know that juvenile diabetes is a listed side effect in the vaccine package insert? There are 42 paragraphs of warnings on the MMR vaccine package insert alone!

In addition, vaccines are made with many toxic ingredients including: aborted human fetal cells as well as live dna from birds, monkeys, dogs. This dna can and does insert its self into the host. Formaldehyde- known carcinogen. Aluminum-neurotoxin. And many others including mercury.

I invite you to question what a society of forced medical treatment by the government looks like. As my representative I urge you to stand for INFORMED CONSENT, FREEDOM OF CHOICE, and VACCINE INJURY AWARENESS, and I hope you see the inherent need for protecting medical freedom for US citizens.

Thank you for you time,
Soma Miller
