

My name is Chantia Mitchell and I am a long time Nevadan for over 25 years now. My family and I would love to stay in this state, but we have been considering moving out of NV more and more seriously due to the California policies that are popping up, and the attempts at removing our religious and medical freedoms in this state, especially pertaining to vaccination, and religious exemption to vaccination. We will absolutely not tolerate, in any way, staying somewhere that is eroding the rights of the people away. Especially in terms of removing religious exemption to vaccination, enforcing mandatory vaccination, or making the laws pertaining to vaccination any more stringent than they already are. Vaccines are a dangerous medical procedure and all people should have the right to choose if that is a risk they are willing to take with their lives or the lives of their children, without government interference. Where there is risk, and there is tons with vaccination, there absolutely must be choice or you are violating the Nuremberg laws, plain and simple. Tomorrow, the Nevada Legislative Interim Committee on Health Care will be reviewing a Possible Action and Report from Immunize Nevada. We all know that their agenda is pushed by the pharmaceutical companies and they serve no other agenda than to limit our medical freedoms and mandate vaccines for all. We vehemently stand against their actions and will fight against any attempt at tyranny and the reduction of our rights in this state and country. I would like to ask you to please protect our right and liberties, and if you haven't already truly research the subject of vaccines before you remotely consider any legal changes. Vaccines are not double blind placebo safety tested, they have not been tested to ensure they won't cause us cancer, infertility, or genetic mutation, they contain neurotoxic aluminum, some such as flu still contain mercury, many contain human DNA, the rest contain animal DNA including but not limited to dog and monkey, the safety of injecting which into our bodies has never been studied, and the injuries from vaccines have been paid out to the tune of 4 billion dollars now just since the 1986 act removing liability from the vaccine manufacturers. These are the same pharmaceutical companies mind you, that are paying out billions of dollars in litigation for deaths and injuries caused by their pharmaceutical products that they are actually liable for, not to mention criminal charges against the companies for breaking numerous laws and performing various fraudulent acts. These are not the people you should be trusting to help you decide what is best for your constituents. The science is not settled here, it is not in the nature of science to ever be settled, that is what keeps us improving and I am grateful for that. There are many things regarding the science of vaccines that were unknown when the theory of them was originally created. Just to mention one, they used to believe it was impossible for the aluminum and mercury in vaccines to cross the blood brain barrier, or anything to for that matter. Now, science has proven that unequivocally false. Those heavy metals DO cross the blood brain barrier and then they have no way out, they just float around causing an immune response in the brain and making the brain repeatedly attack its own healthy tissues. If someone happens to have a common genetic mutation like MTHFR, this effect will be even worse as they already have reduced methylation capabilities. You'll find that 98% of those with autism also have MTHFR. We don't know what the connection is there yet, and that is the point, we don't know a lot of things scientifically and all people are not the same genetically. The case of Hannah Poling is a great example of a girl whose life was ruined by vaccinations because she was different genetically. Until we have a way to know who will and will not be negatively impacted by vaccination, we must leave the choice up to the parents who care for those children to discuss with their doctors and make the right decisions for their families. This is not a government choice, it is a family choice and that is why we must retain our religious and medical freedoms to decline or alter the vaccine schedule

as necessary for the individual. This is America, we are here because we value our freedom,
please keep it that way. Thank you

Sincerely,
Chantia Mitchell
