

Dear Legislative Commission,

I am a resident of Washoe County, and am deeply offended at the idea of requiring students and state employees to be vaccinated for Covid-19. Some might say other vaccines are mandated. Those that are mandated went through the rigorous testing that used to be required of vaccines before the FDA would give the green light. This Covid-19 Vaccine is far from that. It is still experimental, and we do not know the long-term implications of it. There is one medication, Comirnaty, that has been approved by the FDA, but that medication, or vaccine, is not available in the United States. Even that has not undergone the rigorous testing that has become expected of all Americans. So just to be straight, you would be REQUIRING or MANDATING an experimental medication for Nevadans.

Many Nevadans are worried that if vaccine mandates are enacted, what is next? Will you mandate other medical treatments on our bodies? Will other mandates be enacted in the future, any of which violate our civil liberties? Will you require people to be a certain weight, or lose privileges? How about exercise? Will that be mandated? And how will all of this be tracked? Will government enter our homes to see our record at the gym? Will you tell us how many miles we can drive each day or how much we can spend at the grocery store? Can you see how ridiculous this gets????

There are almost ONE MILLION ADVERSE EVENTS related to the Pfizer, Modern and J&J Covid-19 Vaccine now reported to the CDC since this vaccine's inception, more than ALL VACCINES put together since the 1960's. Of the one million adverse events related specifically to this vaccine, 20,000 of them are deaths. Covid-19 has a recovery rate of 99.98% in the population under 50. Why mandate a vaccine, with so many reported disastrous side effects and so many deaths, for a group which had such a high percent certainty of recovery? And with all of these adverse events, you are dooming many of our young people to a life of heart problems, auto-immune disorder, Bell's Palsy, Guianne-Barre Syndrome, miscarriages, and even death.

The Nevada Legislature MUST look at the science of this vaccine, each for him/herself, using a real search engine that doesn't censor the hits. Use DUCKDUCKGO, and see the truth. Do not listen to others and form an opinion. We elected each of you to be thinkers, researchers, listeners. This vaccine is very DANGEROUS to our youth, and they are the hope of our future. I beg you NOT to enact a Legislative Mandate for this dangerous drug.

Carolyn Sullivan
