

Mr. Hass

I am adamantly opposed to mandating the Covid shot to any persons/students working or attending at universities or state/federal employees.

The information that I have researched tells me that there are many ways to treat this virus without any synthetic jab to prevent the virus. My research also tells me that there are many reactions to this drug up to and including death.

As this experimental drug may have been in the making for a long time it is not been tested on humans until we the humans became the lab rats. We do not know how it will affect young women who may want to conceive in the future nor how will affect their children.

Do you want to be responsible for young students dying or having long-term health issues?

This virus is not deadly enough to force people to take any experimental drug especially when there are therapeutics and treatments available to us. Please do not enforce this ridiculous mandate!!

Irie C.
