

Public Comment for Legislative Commission meeting
Dec, 21, 2021

Legislative Committee,

I am speaking and writing to you today to implore you NOT to pass any of these vaccine mandates on Nevadans.

First and foremost, college students are in an age group which, per the CDC, have a nearly 0% chance of dying from Covid. In contrast, they are in the age group which has been shown to suffer from significant incidents of myocarditis. Per recent studies, teenage boys are 6 times more likely to suffer from myocarditis from the vaccine than they are to be hospitalized with Covid.

Attached is our complaint filed against the University of Nevada Reno. In that complaint is a plethora of scientific proof that:

- A) This emergency is over by all parameters of measurement. We are no longer in an emergency so there is no need to mandate an experimental product;
- B) That there is NO evidence whatsoever that once a person has had Covid, that they can get it again OR spread it;
- C) That there is worldwide scientific consensus and the head of the CDC has stated several times that these vaccine do not prevent a person from getting Covid nor do they prevent them from spreading it. AT BEST, the vaccine might prevent severe disease, which is nothing more than personal protection. This in no way contributes to “herd immunity”, which is only achieved when transmission is stopped. To mandate a product that only protects and individual and does nothing to stop transmission is insanity.
- D). The vaccinated carry a very high viral load.² Vaccinated people are more likely to spread coronavirus.³ The vaccinated acquire and transmit the virus as readily – or more readily – than the unvaccinated.⁴
- E). There is much data to show that vaccinated people are more likely to expose the community to variants.^{6,7} McCullough Decl..⁸ And vaccinated people become dependent on vaccine boosters for life. Parks Decl.
- F). The current worldwide trend (i.e., Japan, Sweden, Finland, Denmark, Norway, India, and most countries on the African continent) is to stop aggressively pushing vaccination and start respecting natural immunity and proven cures like Ivermectin and HCQ.¹⁰

In a FOIA request to the CDC, attorney Aaron Siri requested that the CDC provide evidence that anyone who had acquired natural Covid-19 could get the infection again. The CDC could provide NO evidence the a Covid-recovered person had ever become re-infected.

Studies in China prove that asymptomatic spread of Covid-19 is a myth.

In addition to the plethora of science showing that we are not longer in an emergency, that the vaccines are not working and that these vaccines are causing significant harm, (<https://openvaers.com/>) this committee of elected officials needs to understand that Nevadans do not want this product mandated. Overwhelmingly, whether vaccinated or not, Nevadans want freedom of choice when it comes to medical treatments.

By changing the definition of the Covid vaccines from prevention to reduction of symptoms, these vaccines no longer qualify as vaccines; instead they are more of a treatment to potentially lessen symptoms. It is against the Emergency Use Authorization and against US Constitution to mandate any medical treatment.

There is early treatment that must be acknowledged. The Covid-recovered cannot get or spread the infection and persons under 30 have a higher likelihood of suffering from adverse events from the vaccines than they do of acquiring or suffering severe Covid.

Mandating these vaccines make no sense scientifically or ethically. Nevadans do not want this and this body has the responsibility to its constituents and to the Constitution of the United States and of Nevada to not mandate this Emergency Use Authorized, experimental treatment on its constituents. Listen to your constituents and be on the right side of history. Where there is risk, there must be choice. To mandate a failing product is unconstitutional, unethical and against what Nevadans want. Please listen to reason, common sense and your constituents.

Joey Gilbert, Esq.
