

Your decision to promote a vaccine that (only reduces severity) But is causing death and injuries in people (and is) under reported in VAERS (back to the ethics on this...is not only astounding it's disgusting. Especially, when it is clear this is not a vaccine like those of the past... it is however called vaccine to hypnotize those in believing they are receiving the benefits of the vaccines of the past, but in reality it is a gene therapy.

In addition, Ivermectin discussion is suppressed: even though, it has been proven to work as a therapeutic, as a cure, as well as a prophylaxis.

What you should be discussing is how many people have been killed using Ivermectin (you know the conspiracy drug) vs remdesivir the hospital protocol. And yet nothing.

Furthermore, Public Health! Here is what the Public's responsibility is,... it is to expose Liars, Frauds and killers, especially when the hide behind high dollars, big pharma, bad doctors and tyrannical government officials.

If you all choose not to see the censorship and language use; especially when using the words such as (conspiracy theories) and not question..why they would do that... that is your fault. It is also your fault if you do not choose to debunk those conspiracy theories on your own.

I personally am an (obvious theorist) not brainwashed by agenda.

If public health actually cared about public health they'd be telling you the 11 deadly pathogens found on mask. They'd discuss pneumonia, hypercapnia, hypoxia, immunosuppression, but nope! Instead you keep doing circles trying to justify your poor health practices. Saying out load that you need peer reviewed articles, but cite none. Where are your peer reviewed articles?? Especially with the mask enforcement in the state of Nevada and yet the surge continues! Elsevier did the one out of Stanford and I mentioned its findings above! So where is it Chair Peters??? Where is your evidence? All talk no (true) substance. Your plan is to play the public as long as you can... to reach your goals.

Dr. Dick your asymptomatic lie has already been debunked however, a symptomatic person can spread TO A SUSCEPTIBLE PERSON. That's the facts. I WONT EVEN GET INTO YOUR PCR TESTS. YOU ALREADY KNOW! NOT ONLY WAS YOUR COMMENT ON MISINFORMATION AND DISINFORMATION ASinine IT ALSO MADE YOU SOUND GUILTY especially with that shaky voice.
