9/28/2023   Last month, I was invited to a conference in Missouri where people across this country who have been concerned about our elections gathered. I decided to take a poll of my fellow travelers and Uber drivers, to see if they had an opinion of the 2020 election. I talked with 23 people. Only 2 people believed the presidential election was legitimate, while 9 of the 23 believed it was stolen. The rest were evenly divided between being open-minded if they saw evidence that it was rigged, and six who said, "No Opinion." I kept hearing, "Mail-in ballots should be rare, we need voter ID and hand-counted paper ballots." We were shown at the conference how easily the counting could be done. I have been to a caucus where we counted ballots with our neighbors. It was not complicated.

While we don't have access to the voting machines, nor the tabulators and all of the software, we DO have access to the data—the fingerprint that has been left behind. I have taken a deep dive into the Cast Vote Record for District 1 in Washoe County. The graphs are abnormal, and the mail-in ballots were not consistent from beginning to end. One 5,000 block was worse than all of the other 5,000 blocks. It started out 5 consecutive votes for Biden, then 1 for Trump, 8 for Biden, 1 for Trump, 21 for Biden and 1 for Trump. That is a typical example of that block of votes. The bar graph is disturbing. One time it reached 36 consecutive votes for Biden. Dr. Walter Daugherity, a mathematician who received his doctorate from Harvard, said the chance of having **30** "tails" in a row is 1 in a billion. I found a probability calculator and put in the possibility of 36 consecutive votes in a row. It said there was 0 chance.

Jeff O'Donnell, a systems and database engineer ran 100,000 elections to see what the upper and lower limits of what a normal election looks like. In the beginning, there is a lot of leeway, but it settles into a narrow range at the end. The graphs for the mail-in votes for Washoe and Clark counties do not fit in those parameters. If I **shuffle** all of the mail-in ballots, the graph line fits perfectly within the limits.

The bar graphs of the consecutive votes fits in with the formula that Edward Solomon discovered for 99% of the precincts in Washoe and Clark counties. Leaving out election-day votes, you take the total of mail-in ballots plus early voting. The formula Edward Solomon found throughout the 2 counties was— Biden mail-in votes, divided by non-election day votes equals 63.5%. Since I had already compiled the data by the time I saw the video explaining his discovery, it was easy to verify. With over 50,000 votes, Washoe County District 1 came within 166 votes of Solomon's percentage. He says if he can see the final results of three precincts, he knows the outcomes of the rest of precincts. Other states have more complicated formulas, especially Pennsylvania.

'Absentee ballots remain the largest source of potential voter fraud." Jimmy Carter, 39th President of the United States

"I actually held a demonstration for my colleagues here at the Capitol where we brought in folks who — before our eyes — hacked election machines, those that are being used in many states." Kamala Harris,

Senator from California

"We have put together, I think, the most extensive and inclusive voter fraud organization in the history of American politics."
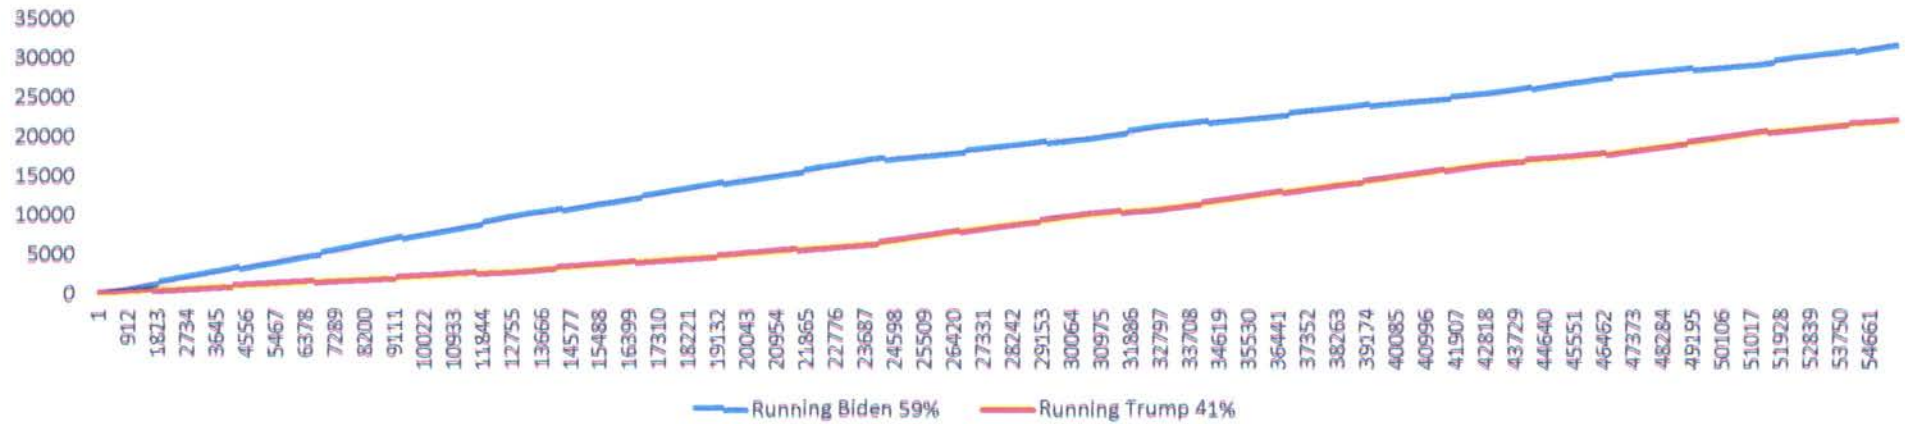

Joe Biden, 2020 Candidate for President

October 24, 2020

Thank you for your part in considering how to make the citizens in this state trust our elections again.

I will provide copies of the graphs and the section from the CVR file for review.
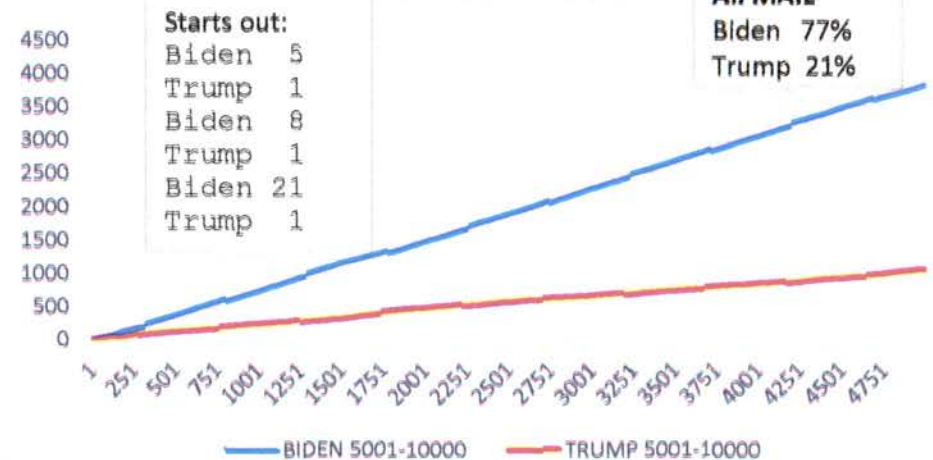

Patty Downing
