Foreword

Personal Health Choices is a joint publication of the Center for Health Information Analysis (CHIA) and the Nevada Department of Health and Human Services, Division of Health Care Financing and Policy. This report presents general acute care hospital inpatient discharge billing records data for 75 common Medicare Severity Diagnosis-Related Groups (MS-DRG) as reported by 36 of Nevada's acute care hospitals that discharged patients within the period of 2012 to 2016.

The data are available through the standard Uniform Billing form, which is utilized by hospitals to bill for their hospital charges. The data include patients who were admitted to a hospital as an inpatient, but do not include patients who were treated and released from the emergency room. It includes information about patients discharged from non-federal hospitals in Nevada. The data identify billed charges, not the actual payments received by the hospital.

The data were compiled by CHIA using information from inpatient hospital billing records. This information was gathered and analyzed as part of a contractual agreement between the Department of Health and Human Services and the University under the authority granted in Section 439B of the Nevada Revised Statutes. CHIA reviews the data and requests corrections when errors are found. It is not possible to detect all errors. CHIA is not responsible for errors that cannot be found by a review.

Introduction

This twenty-ninth edition, Book 1 of Personal Health Choices compares 36 of Nevada's general acute care hospitals with respect to 75 common medical diagnoses and surgical procedures, defined by Medicare Severity Diagnosis Related Groups (MS-DRGs: see below). The definitions to all DRGs can be found on the narrative page for each DRG. Each diagnosis and procedure in this publication may be based on an individual DRG or multiple related DRGs.

THE DIAGNOSIS RELATED GROUP (DRG) SYSTEM

Diagnosis Related Group (DRG), is a classification system that is based on principal and secondary disease diagnoses, medical and surgical procedures, complications, comorbidities (coexisting conditions), age and discharge status. The DRG system is complex in its construction, and is based upon documentation in the patient's medical record. DRGs are divided into 25 exclusive categories referred to as major diagnostic categories (MDCs). DRGs enable hospitals to recover the appropriate reimbursement for services rendered, evaluate the quality of care and assist in evaluating utilization of services. The DRGs classify patients with similar utilization of hospital resources and length of stay patterns. Each DRG represents the average resources needed to treat patients grouped to that DRG compared to the national average of resources to treat all Medicare patients. Hospitals are reimbursed at a flat rate based on the theory that patients with similar illnesses undergoing similar procedures will require similar care. The primary outcome of the DRG system is the more efficiently a hospital delivers care, the greater its operating margin will be.

INFORMATION LEVEL

Personal Health Choices is intended as a source of information regarding the billed charges of hospitals in Nevada, and should not be construed as a definitive guide for selecting a hospital in order to receive inpatient medical care. The financial information in this report is based on billed charges rather than the amount actually collected on discharged patients per DRG. Billed charges and collected charges can differ significantly. This report provides the reader information about one component of healthcare pricing - inpatient hospitalization. Hospital outpatient services as well as professional physician and other non-hospital inpatient ancillary healthcare services are not covered in this report.

CREDIT DUE: Google (www.google.com) and Medical Dictionary (<http://medical-dictionary.thefreedictionary.com>) were used to obtain definitions for medical terms.

Factors

The information provided in this report is formatted to present narrative and tabular data on the first page and detailed tabular data on the second. This report covers a five-year trend line for DRG-related data. DRGs are sometimes broken down by age factors and/or presence of comorbidity. Comorbidity or comorbid conditions are defined as two or more coexisting medical conditions.

The first page of each selected DRG presents gender and age breakdowns of the overall hospital inpatient population, factored by the total number of discharges, average length of hospital stay and average billed charges. The age categories consist of 0-17, 18-35, 36-49, 50-64, and 65+. The narrative information on the first page for each DRG is based on the available data and may contain information on specific diagnoses and surgical procedures involved in the treatment of the patient. These diagnoses and procedures may not always be directly related to the primary ailment. The second page examines specific hospitals in Clark, Washoe and the Rural counties with regard to total discharges, average length of stays, and average billed charges.

It should be noted that, when comparing hospitals to average length of stay and billed charges, information based on small numbers of cases cannot provide a reliable statistical base upon which information can reflect a given hospital's experience. Further, physician charges (including those of surgeons) are normally separate from hospital charges, except in rural areas where some physician services -- such as radiology, anesthesia, and laboratory tests -- may be included in the hospital charges.

The Center for Health Information Analysis (CHIA) receives patient bill records directly from all the hospitals. These data are reviewed, and if errors are found, a resend is requested. Missing or out of range fields as well as statistical mixes of fields such as payer, gender, and race are looked at in the review.

GENERAL ACUTE CARE HOSPITALS

Hospital Name	Address	Phone	Beds	County
Battle Mountain General Hospital	535 Humboldt St., Battle Mountain, NV 89820	(775) 635-2550	7	Lander
Boulder City Hospital	901 Adams Blvd., Boulder City, NV 89005	(702) 293-4111	82	Clark
Carson Tahoe Regional Medical Center	1600 Medical Pkwy., Carson City, NV 89703	(775) 445-8000	211	Carson

Degenerative Nervous System Disorders (056-057)

Diagnoses: that frequently accompanied Degenerative Nervous System Disorders were: 1) Alzheimer's disease (3310), 2) Unspecified essential hypertension (4019), 3) Paralysis agitans (3320), 4) Hemiplegia, unspecified, affecting unspecified side (34290), 5) Dementia with lewy bodies (33182).

Definitions: **Alzheimer's disease:** A progressive, degenerative disorder that attacks the brain's nerve cells, or neurons, resulting in loss of memory, thinking and language skills, and behavioral changes. **Hypertension:** High blood pressure. **Hemiplegia:** Paralysis of one side of the body. **Dementia:** A general term for a decline in mental ability severe enough to interfere with daily life. Memory loss is an example. Alzheimer's is the most common type of dementia.

Multiple Sclerosis & Cerebellar Ataxia (058-060)

Diagnoses: that frequently accompanied Multiple Sclerosis & Cerebellar Ataxia were: 1) Unspecified essential hypertension (4019), 2) Chronic pain syndrome (3384), 3) Abnormality of gait (7812), 4) Anxiety state, unspecified (30000), 5) Tobacco use disorder (3051), 6) Hemiplegia, unspecified, affecting unspecified side (34290).

Definitions: **Multiple sclerosis:** A chronic degenerative disease of the central nervous system in which gradual destruction of myelin occurs in patches throughout the brain or spinal cord or both, interfering with the nerve pathways and causing muscular weakness, loss of coordination, and speech and visual disturbances. **Hypertension:** High blood pressure. **Neuromyelitis:** Also called Devic's disease, is a central nervous system disorder causing primarily swelling and inflammation of the eye nerves (optic neuritis) and the spinal cord (myelitis). **Myelin:** An insulating layer, or sheath, that forms around nerves, including those in the brain and spinal cord. It is made up of protein and fatty substances. **Hemiplegia:** Paralysis of one side of the body.

Acute Ischemic Stroke With Use Of Thrombolytic Agent (061-063)

Diagnoses: that frequently accompanied Acute Ischemic Stroke With Use Of Thrombolytic Agent were: 1) Cerebral artery occlusion, unspecified with cerebral infarction (43491), 2) Hemiplegia, unspecified, affecting unspecified side (34290), 3) Unspecified essential hypertension (4019), 4) Other and unspecified hyperlipidemia (2724), 5) Aphasia (7843).

Definitions: **Ischemic stroke:** A stroke caused by diminished blood flow to a particular artery in the brain, e.g., as a result of a clot in the artery or an embolus lodging in the artery. **Ischemia:** An insufficient supply of blood to an organ, usually due to a blocked artery. **Hemiplegia:** Paralysis of one side of the body. **Thrombosis:** Formation of a clot in the blood that either blocks, or partially blocks a blood vessel. The thrombus may lead to infarction, or death of tissue, due to a blocked blood supply. **Embolism:** The obstruction of a blood vessel by a foreign substance or a blood clot that travels through the bloodstream, lodging in a blood vessel, plugging the vessel. Foreign substances that can cause embolisms include air bubbles, amniotic fluid, globules of fat, clumps of bacteria, chemicals (such as talc), and drugs (mainly illegal ones). **Infarction:** Death of tissue from deprivation of its blood supply. **Stenosis:** The abnormal narrowing of a passage in the body. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood.

Intracranial Hemorrhage Or Cerebral Infarction (064-066)

Diagnoses: that frequently accompanied Intracranial Hemorrhage Or Cerebral Infarction were: 1) Cerebral artery occlusion, unspecified with cerebral infarction (43491), 2) Cerebral embolism with cerebral infarction (43411), 3) Occlusion and stenosis of carotid artery with cerebral infarction (43311), 4) Subdural hemorrhage (4321), 5) Unspecified essential hypertension (4019), 6) Acute respiratory failure (51881), 7) Hemiplegia, unspecified, affecting unspecified side (34290), 8) Tobacco use disorder (3051), 9) Long-term (current) use of aspirin (V5866).

Definitions: **Occlusion:** The blockage or closing of a blood vessel or hollow organ. **Hemorrhage:** An escape of blood from the blood vessels, especially when excessive. **Arteriography:** Radiography of an artery, carried out after injection of a radio-opaque substance. **Thrombosis:** Formation of a clot in the blood that either blocks, or partially blocks a blood vessel. The thrombus may lead to infarction, or death of tissue, due to a blocked blood supply. **Embolism:** The obstruction of a blood vessel by a foreign substance or a blood clot that travels through the bloodstream, lodging in a blood vessel, plugging the vessel. Foreign substances that can cause embolisms include air bubbles, amniotic fluid, globules of fat, clumps of bacteria, chemicals (such as talc), and drugs (mainly illegal ones). **Infarction:** Death of tissue from deprivation of its blood supply. **Stenosis:** The abnormal narrowing of a passage in the body. **Hypertension:** High blood pressure. **Hemiplegia:** Paralysis of one side of the body.

Transient Ischemia (069)

Diagnoses: that frequently accompanied Transient Ischemia were: 1) Unspecified transient cerebral ischemia (4359), 2) Unspecified essential hypertension (4019), 3) Other and unspecified hyperlipidemia (2724), 4) Personal history of transient ischemic attack (TIA), and cerebral infarction without residual deficits (V1254), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000).

Definitions: **Ischemic stroke:** A stroke caused by diminished blood flow to a particular artery in the brain, e.g., as a result of a clot in the artery or an embolus lodging in the artery. **Ischemia:** An insufficient supply of blood to an organ, usually due to a blocked artery. **Transient ischemic attack (TIA):** A neurological event with the signs and symptoms of a stroke, but which go away within a short period of time. Also called a mini-stroke, a TIA is due to a temporary lack of adequate blood and oxygen (ischemia) to the brain. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood.

Major Chest Procedures (163-165)

Procedures: that frequently accompanied Major Chest Procedures were: 1) Insertion of intercostal catheter for drainage (3404), 2) Lobectomies of the lung (324), 3) Decortication of lung (3451), 4) Fiber-optic bronchoscopy (3322), 5) Biopsy of lymphatic structure (4011).

Definitions: **Bronchoscopy:** A procedure in which a cylindrical fiberoptic scope is inserted into the airways. This scope contains a viewing device that allows the visual examination of the lower airways. **Thoracoscopy:** A procedure in which a thin tube is attached to a camera and inserted into the chest cavity through small incisions in the skin. **Wedge resection:** A surgical procedure to remove a triangle-shaped slice of tissue. It may be used to remove a tumor or some other type of tissue that requires removal and typically includes a small amount of normal tissue around it. **Lobectomy:** The surgical removal of a lobe of an organ. It most often refers to the removal of a section of a lung. It may also refer to the liver, brain, thyroid gland, and other organs. **Decortication:** A medical procedure involving the surgical removal of the surface layer, membrane, or fibrous cover of an organ. The procedure is usually performed when the lung is covered by a thick, inelastic pleural peel restricting lung expansion. **Intercostal:** Located or occurring between the ribs.

Comment: This procedure includes surgery on structures within the chest cavity, excluding the heart. The most common procedures are those involving the lungs and the esophagus.

Respiratory Infections & Inflammations (177-179)

Diagnoses: that frequently accompanied Respiratory Infections & Inflammations were: 1) Pneumonitis due to inhalation of food or vomitus (5070), 2) Unspecified essential hypertension (4019), 3) Chronic airway obstruction, not elsewhere classified (496), 4) Hypoxemia (79902), 5) Dysphagia, unspecified (78720), 6) Anemia, unspecified (2859), 7) Personal history of tobacco use (V1582).

Definitions: **Pneumonia:** Inflammation of the lungs, usually due to infection with bacteria, viruses, or other pathogenic organisms. **Pseudomonas:** A genus of motile, polar-flagellate, non-spore-forming, strictly aerobic bacteria (family Pseudomonadaceae) containing gram-negative rods that occur singly. The metabolism is oxidative. They occur commonly in soil and in freshwater and marine environments. Some species are plant pathogens. Others are involved in human infections. **Hypoxemia:** An abnormal deficiency in the concentration of oxygen in arterial blood. **Dysphagia:** Difficulty in swallowing. **Staphylococcus:** A genus of nonmotile spherical gram-positive bacteria. Some species are normally found on the skin and in the throat. Certain species cause severe purulent infections or produce an enterotoxin, which may cause nausea, vomiting, and diarrhea. Life-threatening staphylococcal infections may arise within hospitals. **Pathogen:** Any virus, microorganism, or other substance causing disease. **Aspiration pneumonia:** An inflammatory condition of the lungs and bronchi caused by inhalation of foreign material or vomitus. **Hypertension:** High blood pressure.

Respiratory Neoplasms (180-182)

Diagnoses: that frequently accompanied Respiratory Neoplasms were: 1) Unspecified essential hypertension (4019), 2) Personal history of tobacco use (V1582), 3) Tobacco use disorder (3051), 4) Pneumonia, organism unspecified (486), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000).

Definitions: **Hypertension:** High blood pressure. **Neoplasm:** An abnormal tissue that grows by cellular proliferation more rapidly than normal and continues to grow after the stimuli that initiated the new growth cease. Neoplasms show partial or complete lack of structural organization and functional coordination with the normal tissue, and usually form a distinct mass of tissue that may be either benign (benign tumor) or malignant (cancer). **Malignant:** Tending to become worse and end in death. **Pneumonia:** Inflammation of the lungs, usually due to infection with bacteria, viruses, or other pathogenic organisms. **Hypoxia:** An inadequate supply of oxygen to tissues. **Cyanosis:** A bluish color of the skin and the mucous membranes due to insufficient oxygen in the blood. **Bronchiectasis:** A condition in which an area of the bronchial tubes is permanently and abnormally widened (dilated), with accompanying infection.

Comment: The lungs consist of bronchial tubes and lobes. During respiration air enters the bronchial tubes. These tubes continuously branch into smaller tubules called bronchioles. There are 5 sections or lobes within the lung. The right lung contains three lobes: upper, middle and lower. The left lung contains two: upper and lower. Neoplasms may be found in any part of the lung, from the bronchial tubes (ICD-9 1629) to the lobes (ICD-9 1623).

Major Chest Trauma (183-185)

Diagnoses: that frequently accompanied Major Chest Trauma were: 1) Unspecified essential hypertension (4019), 2) Closed fracture of one rib (80701), 3) Closed fracture of two ribs (80702), 4) Closed fracture of three ribs (80703), 5) Tobacco use disorder (3051), 6) Contusion of lung without mention of open wound into thorax (86121), 7) Other and unspecified hyperlipidemia (2724).

Definitions: **Hypertension:** High blood pressure. **Fracture:** A break in bone or cartilage. Although usually a result of trauma, a fracture can be the result of an acquired disease of bone, such as osteoporosis, or of abnormal formation of bone in a congenital disease of bone, such as osteogenesis imperfecta ('brittle bone disease'). **Thorax:** The part of the body between the neck and abdomen; it is separated from the abdomen by the diaphragm. **Diaphragm:** The musculomembranous partition separating the thoracic and abdominal cavities. **Contusion:** An injury in which the skin is not broken, often characterized by ruptured blood vessels and discolorations; a bruise. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood.

Comment: Major chest trauma is normally the result of an accident, such as an automobile accident (E8495). The resulting damage may be broken ribs or sternum, a collapsed or damaged lung or other chest organs.

Note: Throughout this publication you may find a number of ailments accompanied by tobacco use disorder and/or hypertension. These often do not have a direct correlation to the ailment, but are left in to demonstrate to the reader their high frequency.

Pulmonary Edema & Respiratory Failure (189)

Diagnoses: that frequently accompanied Pulmonary Edema & Respiratory Failure were: 1) Acute respiratory failure (51881), 2) Unspecified essential hypertension (4019), 3) Obstructive chronic bronchitis with (acute) exacerbation (49121), 4) Congestive heart failure, unspecified (4280), 5) Personal history of tobacco use (V1582), 6) Pneumonia, organism unspecified (486).

Definitions: **Edema:** Swelling of soft tissues as a result of excess fluid accumulation. **Hypertension:** High blood pressure. **Bronchitis:** An inflammation of the air passages between the nose and the lungs, including the windpipe or trachea and the larger air tubes of the lung that bring air in from the trachea (bronchi). **Chronic obstructive pulmonary disease:** Refers to a group of lung diseases that block airflow and make breathing difficult. Emphysema and chronic bronchitis are the two most common conditions that make up COPD. **Exacerbation:** Increase in severity of a disease or any of its symptoms. **Hypoxia:** An inadequate supply of oxygen to tissues. **Cyanosis:** A bluish color of the skin and the mucous membranes due to insufficient oxygen in the blood. **Bronchiectasis:** A condition in which an area of the bronchial tubes is permanently and abnormally widened (dilated), with accompanying infection. **Pneumonia:** Inflammation of the lungs, usually due to infection with bacteria, viruses, or other pathogenic organisms.

Chronic Obstructive Pulmonary Disease (190-192)

Diagnoses: that frequently accompanied Chronic Obstructive Pulmonary Disease were: 1) Obstructive chronic bronchitis with (acute) exacerbation (49121), 2) Unspecified essential hypertension (4019), 3) Tobacco use disorder (3051), 4) Other and unspecified hyperlipidemia (2724), 5) Congestive heart failure, unspecified (4280).

Definitions: **Chronic obstructive pulmonary disease:** Refers to a group of lung diseases that block airflow and make breathing difficult. Emphysema and chronic bronchitis are the two most common conditions that make up COPD. **Hypertension:** High blood pressure. **Exacerbation:** Increase in severity of a disease or any of its symptoms. **Asthma:** Chronic inflammatory disease of the airways. **Status asthmaticus:** A condition of severe, prolonged asthma. **Hypoxia:** An inadequate supply of oxygen to tissues. **Cyanosis:** A bluish color of the skin and the mucous membranes due to insufficient oxygen in the blood. **Bronchiectasis:** A condition in which an area of the bronchial tubes is permanently and abnormally widened (dilated), with accompanying infection.

Simple Pneumonia & Pleurisy (193-195)

Diagnoses: that frequently accompanied Simple Pneumonia & Pleurisy were: 1) Unspecified essential hypertension (4019), 2) Acute respiratory failure (51881), 3) Congestive heart failure, unspecified (4280), 4) Personal history of tobacco use (V1582), 5) Chronic airway obstruction, not elsewhere classified (496), 6) Obstructive chronic bronchitis with (acute) exacerbation (49121), 7) Hypoxemia (79902), 8) Asthma, unspecified type, unspecified (49390), 9) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 10) Unspecified acquired hypothyroidism (2449).

Definitions: **Hypertension:** High blood pressure. **Pneumonia:** Inflammation of the lungs, usually due to infection with bacteria, viruses, or other pathogenic organisms.

Pulmonary alveoli: Small outpouchings along the walls of the alveolar sacs and alveolar ducts; through them, gas exchange takes place between alveolar gas and pulmonary capillary blood. **Bronchioles:** Small airways extending from the bronchi into the lobes of the lungs. **Pleurisy:** An inflammation of the membrane that surrounds and protects the lungs (the pleura). **Bronchitis:** An inflammation of the air passages between the nose and the lungs, including the windpipe or trachea and the larger air tubes of the lung that bring air in from the trachea (bronchi). **Exacerbation:** Increase in severity of a disease or any of its symptoms. **Hypoxemia:** An abnormal deficiency in the concentration of oxygen in arterial blood. **Asthma:** Chronic inflammatory disease of the airways. **Hypothyroidism:** Diminished production of thyroid hormone, leading to clinical manifestations of thyroid insufficiency, including low metabolic rate, tendency to gain weight, somnolence, and sometimes myxedema.

Bronchitis & Asthma (202-203)

Diagnoses: that frequently accompanied Bronchitis & Asthma were: 1) Hypoxemia (79902), 2) Unspecified essential hypertension (4019), 3) Pneumonia, organism unspecified (486), 4) Other and unspecified hyperlipidemia (2724), 5) Hypopotassemia (2768), 6) Obesity, unspecified (27800), 7) Acute bronchiolitis due to respiratory syncytial virus (RSV) (46611), 8) Unspecified otitis media (3829), 9) Dehydration (27651), 10) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000).

Definitions: **Hypertension:** High blood pressure. **Hypoxemia:** An abnormal deficiency in the concentration of oxygen in arterial blood. **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body. **Hypopotassemia:** A deficiency of potassium in the blood. **Bronchitis:** An inflammation of the air passages between the nose and the lungs, including the windpipe or trachea and the larger air tubes of the lung that bring air in from the trachea (bronchi). **Asthma:** Chronic inflammatory disease of the airways. **Asphyxia:** The extreme condition caused by lack of oxygen and excess of carbon dioxide in the blood. **Otitis media:** An inflammation or infection of the middle ear, common in early childhood.

Cardiac Valve & Other Major Cardiothoracic Procedures (216-221)

Procedures: that frequently accompanied Cardiac Valve & Other Major Cardiothoracic Procedures were: 1) Coronary arteriography using catheter(s) (8855-6), 2) Extracorporeal circulation auxiliary to open heart surgery (3961), 3) Open and other replacement of aortic valve with tissue graft (3521), 4) Angiocardiology (8850-4), 5) Monitoring of cardiac output (8967-8), 6) Transfusion (990), 7) Cardioplegia (3963).

Definitions: **Coronary:** Pertaining to encircling structures, such as the coronary arteries; pertaining to the heart. **Aorta:** The main artery of the body, supplying oxygenated blood to the circulatory system. **Arteriography:** Radiography of an artery, carried out after injection of a radio-opaque substance. **Catheter:** A hollow flexible tube for insertion into a body cavity, duct, or vessel to allow the passage of fluids or distend a passageway. **Angiocardiology:** A radiographic diagnostic study of the heart in which valves and vessels are examined via x-ray and fluoroscopy following the introduction of contrast media. **Transfusion:** Transfer of blood or a blood component from one person (donor) to another (recipient). **Cardioplegia:** Paralysis of the heart, as may be done electively in stopping the heart during cardiac surgery.

Coronary Bypass With PTCA (231-232)

Procedures: that frequently accompanied Coronary Bypass With PTCA were: 1) Percutaneous transluminal coronary angioplasty [PTCA] (0066), 2) Single internal mammary-coronary artery bypass (3615), 3) Left heart cardiac catheterization (3722), 4) Coronary arteriography using two catheters (8856).

Definitions: **PTCA:** A minimally invasive procedure to open up blocked coronary arteries, allowing blood to circulate unobstructed to the heart muscle. **Angioplasty:** A procedure used to widen vessels narrowed by stenoses or occlusions. **Coronary:** Pertaining to encircling structures, such as the coronary arteries; pertaining to the heart. **Aorta:** The main artery of the body, supplying oxygenated blood to the circulatory system. **Arteriography:** Radiography of an artery, carried out after injection of a radio-opaque substance. **Catheter:** A hollow flexible tube for insertion into a body cavity, duct, or vessel to allow the passage of fluids or distend a passageway. **Angiocardiology:** A radiographic diagnostic study of the heart in which valves and vessels are examined via x-ray and fluoroscopy following the introduction of contrast media.

Coronary Bypass (233-236)

Procedures: that frequently accompanied Coronary Bypass were: 1) Single internal mammary-coronary artery bypass (3615), 2) Coronary arteriography using two catheters (8856), 3) Left heart cardiac catheterization (3722), 4) Angiocardiology of left heart structures (8853), 5) Extracorporeal circulation auxiliary to open heart surgery (3961), 6) (Aorto)coronary bypass of three coronary arteries (3613), 7) (Aorto)coronary bypass of two coronary arteries (3612).

Definitions: **Coronary bypass:** A surgical procedure performed to improve blood supply to the heart by creating new routes for blood flow when one or more of the coronary arteries become obstructed. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels. **Subendocardial:** Beneath the endocardium. **Endocardium:** The lining of the interior surface of the heart chambers. **Angiocardiology:** A radiographic diagnostic study of the heart in which valves and vessels are examined via x-ray and fluoroscopy following the introduction of contrast media. **Myocardial infarction:** Death of the cells of an area of the heart muscle (myocardium) as a result of oxygen deprivation, which in turn is caused by obstruction of the blood supply; commonly referred to as a heart attack.

Major Cardiovascular Procedures (237-238,268-272)

Procedures: that frequently accompanied Major Cardiovascular Procedures were: 1) Implant of pulsation balloon (3761), 2) Coronary arteriography using two catheters (8856), 3) Insertion of endotracheal tube (9604), 4) Left heart cardiac catheterization (3722), 5) Endovascular implantation of other graft in abdominal aorta (3971), 6) Aortography (8842), 7) Arteriography of femoral and other lower extremity arteries (8848).

Definitions: **Cardiovascular disease:** Any abnormal condition characterized by dysfunction of the heart and blood vessels. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels. **Cardiac catheterization:** A diagnostic procedure which does a comprehensive examination of how the heart and its blood vessels function. **Bypass:** An auxiliary flow; a shunt; a surgically created pathway circumventing the normal anatomical pathway, such as in an artery or the intestine. **Aneurysm:** A localized dilation of the wall of a blood vessel. **Arteriography:** Radiography of an artery, carried out after injection of a radio-opaque substance. **Catheter:** A hollow flexible tube for insertion into a body cavity, duct, or vessel to allow the passage of fluids or distend a passageway. **Angioplasty:** A procedure used to widen vessels narrowed by stenoses or occlusions.

Comment: Cardiovascular procedures include (but are not limited to) diagnostic cardiac catheterization, coronary artery bypass graft procedures, cardiac pacemaker procedures, and heart valve procedures.

Note: DRGs 237-238 were replaced with DRGs 268-272 by the Centers for Medicare & Medicaid Services (CMS) On 10/01/2015.

Permanent Cardiac Pacemaker Implant (242-244)

Procedures: that frequently accompanied Permanent Cardiac Pacemaker Implant were: 1) Coronary arteriography using two catheters (8856), 2) Hemodialysis (3995), 3) Left heart cardiac catheterization (3722), 4) Angiocardiography of left heart structures (8853), 5) Transfusion of packed cells (9904), 6) Continuous invasive mechanical ventilation for less than 96 consecutive hours (9671), 7) Initial insertion of transvenous lead [electrode] into ventricle (3771).

Definitions: **Hemodialysis:** A method of mechanically cleansing the blood outside of the body, in order to remove various substances that would normally be cleared by the kidneys. **Atrioventricular block:** Partial or complete block of electrical impulses originating in the atrium or sinus node, preventing them from reaching the AV node and ventricles. **Subendocardial:** Beneath the endocardium. **Myocardial infarction:** Death of the cells of an area of the heart muscle (myocardium) as a result of oxygen deprivation, which in turn is caused by obstruction of the blood supply; commonly referred to as a heart attack. **Dysrhythmia:** An irregular heartbeat - the heart may beat too fast (tachycardia), too slowly (bradycardia), too early (premature contraction) or too irregularly (fibrillation). **Atrial fibrillation:** An irregular and often very fast heart rate. The heart's two upper chambers (the atria) beat chaotically and irregularly - out of coordination with the two lower chambers (the ventricles) of the heart.

Acute Myocardial Infarction, Discharged Alive (280-282)

Diagnoses: that frequently accompanied Acute Myocardial Infarction, Discharged Alive were: 1) Subendocardial infarction (4107), 2) Congestive heart failure, unspecified (4280), 3) Coronary atherosclerosis of native coronary artery (41401), 4) Unspecified essential hypertension (4019), 5) Mixed hyperlipidemia (2722), 6) Tobacco use disorder (3051).

Definitions: **Subendocardial:** Beneath the endocardium. **Endocardium:** The lining of the interior surface of the heart chambers. **Myocardial infarction:** Death of the cells of an area of the heart muscle (myocardium) as a result of oxygen deprivation, which in turn is caused by obstruction of the blood supply; commonly referred to as a heart attack.

Necrosis: Death of cells or tissues through injury or disease, especially in a localized area of the body. **Coronary artery(s):** Either of two arteries that arise one from the left and one from the right side of the aorta immediately above the semilunar valves and supply the tissues of the heart itself. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels. **Hypertension:** High blood pressure. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood.

Acute Myocardial Infarction, Expired (283-285)

Diagnoses: that frequently accompanied Acute Myocardial Infarction, Expired were: 1) Acute respiratory failure (51881), 2) Subendocardial infarction (4107), 3) Congestive heart failure, unspecified (4280), 4) Coronary atherosclerosis of native coronary artery (41401), 5) Cardiac arrest (4275), 6) Unspecified essential hypertension (4019), 7) Atrial fibrillation (42731), 8) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000).

Definitions: **Subendocardial:** Beneath the endocardium. **Endocardium:** The lining of the interior surface of the heart chambers. **Myocardial infarction:** Death of the cells of an area of the heart muscle (myocardium) as a result of oxygen deprivation, which in turn is caused by obstruction of the blood supply; commonly referred to as a heart attack. **Necrosis:** Death of cells or tissues through injury or disease, especially in a localized area of the body. **Coronary artery(s):** Either of two arteries that arise one from the left and one from the right side of the aorta immediately above the semilunar valves and supply the tissues of the heart itself. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels. **Hypertension:** High blood pressure. **Atrial fibrillation:** An irregular and often very fast heart rate. The heart's two upper chambers (the atria) beat chaotically and irregularly - out of coordination with the two lower chambers (the ventricles) of the heart.

Heart Failure & Shock (291-293)

Diagnoses: that frequently accompanied Heart Failure & Shock were: 1) Pneumonia, organism unspecified (486), 2) Atrial fibrillation (42731), 3) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 4) Unspecified essential hypertension (4019), 5) Other and unspecified hyperlipidemia (2724), 6) Acute kidney failure, unspecified (5849), 7) Coronary atherosclerosis of native coronary artery (41401).

Definitions: **Hypertension:** High blood pressure. **Atrial fibrillation:** An irregular and often very fast heart rate. The heart's two upper chambers (the atria) beat chaotically and irregularly - out of coordination with the two lower chambers (the ventricles) of the heart. **Congestive heart failure:** Inability of the heart to keep up with the demands on it, with failure of the heart to pump blood with normal efficiency. **Shock:** A state characterized by inadequacy of blood flow throughout the body to the extent that damage occurs to the cells of the tissues; if the shock is prolonged, the cardiovascular system itself becomes damaged and begins to deteriorate, resulting in a vicious cycle that leads to death.

Hypertensive heart disease: High blood pressure resulting in a disease of the heart. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels.

Hyperlipidemia: An abnormally high concentration of fats or lipids in the blood.

Cardiac Arrest, Unexplained (296-298)

Diagnoses: that frequently accompanied Cardiac Arrest, Unexplained were: 1) Acute respiratory failure (51881), 2) Anoxic brain damage (3481), 3) Unspecified essential hypertension (4019), 4) Acidosis (2762), 5) Acute kidney failure, unspecified (5849), 6) Atrial fibrillation (42731).

Definitions: **Hypertension:** High blood pressure. **Acidosis:** The accumulation of acid and hydrogen ions or depletion of the alkaline reserve (bicarbonate content) in the blood and body tissues, resulting in a decrease in pH. **Axon:** The single process of a nerve cell that under normal conditions conducts nervous impulses away from the cell body and its remaining processes (dendrites). **Congestive heart failure:** Inability of the heart to keep up with the demands on it, with failure of the heart to pump blood with normal efficiency. **Shock:** A state characterized by inadequacy of blood flow throughout the body to the extent that damage occurs to the cells of the tissues; if the shock is prolonged, the cardiovascular system itself becomes damaged and begins to deteriorate, resulting in a vicious cycle that leads to death. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels.

Peripheral Vascular Disorders (299-301)

Diagnoses: that frequently accompanied Peripheral Vascular Disorders were: 1) Unspecified essential hypertension (4019), 2) Acute venous embolism and thrombosis of deep vessels of proximal lower extremity (45341), 3) Tobacco use disorder (3051), 4) Chronic airway obstruction, not elsewhere classified (496), 5) Other and unspecified hyperlipidemia (2724), 6) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000).

Definitions: **Hypertension:** High blood pressure. **Embolism:** The obstruction of a blood vessel by a foreign substance or a blood clot that travels through the bloodstream, lodging in a blood vessel, plugging the vessel. Foreign substances that can cause embolisms include air bubbles, amniotic fluid, globules of fat, clumps of bacteria, chemicals (such as talc), and drugs (mainly illegal ones). **Thrombosis:** Formation of a clot in the blood that either blocks, or partially blocks a blood vessel. The thrombus may lead to infarction, or death of tissue, due to a blocked blood supply. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Atrial fibrillation:** An irregular and often very fast heart rate. The heart's two upper chambers (the atria) beat chaotically and irregularly - out of coordination with the two lower chambers (the ventricles) of the heart.

Comment: This page largely pertains to vascular disorders peripheral to the heart.

Atherosclerosis (302-303)

Diagnoses: that frequently accompanied Atherosclerosis were: 1) Unspecified essential hypertension (4019), 2) Intermediate coronary syndrome (4111), 3) Old myocardial infarction (412), 4) Tobacco use disorder (3051), 5) Long-term (current) use of aspirin (V5866), 6) Other and unspecified hyperlipidemia (2724), 7) Esophageal reflux (53081).

Definitions: **Hypertension:** High blood pressure. **Myocardial infarction:** Death of the cells of an area of the heart muscle (myocardium) as a result of oxygen deprivation, which in turn is caused by obstruction of the blood supply; commonly referred to as a heart attack. **Necrosis:** Death of cells or tissues through injury or disease, especially in a localized area of the body. **Myocardium:** The middle layer of the heart, consisting of cardiac muscle. **Embolism:** The obstruction of a blood vessel by a foreign substance or a blood clot that travels through the bloodstream, lodging in a blood vessel, plugging the vessel. Foreign substances that can cause embolisms include air bubbles, amniotic fluid, globules of fat, clumps of bacteria, chemicals (such as talc), and drugs (mainly illegal ones). **Thrombosis:** Formation of a clot in the blood that either blocks, or partially blocks a blood vessel. The thrombus may lead to infarction, or death of tissue, due to a blocked blood supply. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Atrial fibrillation:** An irregular and often very fast heart rate. The heart's two upper chambers (the atria) beat chaotically and irregularly - out of coordination with the two lower chambers (the ventricles) of the heart. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels.

Hypertension (304-305)

Diagnoses: that frequently accompanied Hypertension were: 1) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 2) Tobacco use disorder (3051), 3) Other and unspecified hyperlipidemia (2724), 4) Other chest pain (78659), 5) Hypopotassemia (2768).

Definitions: **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body. **Hyperglycemia:** An abnormally high concentration of glucose in the circulating blood, seen especially in patients with diabetes mellitus. **Hypertension:** High blood pressure. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Chest pain:** A physical complaint that requires immediate diagnosis and evaluation. **Hypopotassemia:** A deficiency of potassium in the blood.

Cardiac Arrhythmia & Conduction Disorders (308-310)

Diagnoses: that frequently accompanied Cardiac Arrhythmia & Conduction Disorders were: 1) Atrial fibrillation (42731), 2) Unspecified essential hypertension (4019), 3) Congestive heart failure, unspecified (4280), 4) Other and unspecified hyperlipidemia (2724), 5) Chronic airway obstruction, not elsewhere classified (496), 6) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000).

Definitions: **Atrial fibrillation:** An irregular and often very fast heart rate. The heart's two upper chambers (the atria) beat chaotically and irregularly - out of coordination with the two lower chambers (the ventricles) of the heart. **Atrial flutter:** Well-organized but overly rapid contractions of the atrium of the heart. **Sinus node dysfunction:** A group of heart rhythm problems (arrhythmias) in which the sinus node — the heart's natural pacemaker — doesn't work properly. **Cardiac dysrhythmias:** Any abnormality in the rate, regularity, or sequence of cardiac activation. **Paroxysmal ventricular tachycardia:** A rapid heartbeat of sudden onset and termination caused by a quick succession of discharges from an ectopic (an impulse that originates in the heart at a site other than the sinus node) site in the ventricle. **Hypertension:** High blood pressure. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood.

Angina Pectoris (311)

Diagnoses: that frequently accompanied Angina Pectoris were: 1) Intermediate coronary syndrome (4111), 2) Unspecified essential hypertension (4019), 3) Other and unspecified hyperlipidemia (2724), 4) Tobacco use disorder (3051), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000).

Definitions: **Chest pain:** A physical complaint that requires immediate diagnosis and evaluation. **Angina:** Pain, discomfort, or pressure localized in the chest that is caused by an insufficient supply of blood (ischemia) to the heart muscle. It is also sometimes characterized by a feeling of choking, suffocation, or crushing heaviness. **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body. **Hyperglycemia:** An abnormally high concentration of glucose in the circulating blood, seen especially in patients with diabetes mellitus. **Ischemia:** An insufficient supply of blood to an organ, usually due to a blocked artery. **Atherosclerosis:** The build up of a waxy plaque on the inside of blood vessels.

Chest Pain (313)

Diagnoses: that frequently accompanied Chest Pain were: 1) Unspecified essential hypertension (4019), 2) Tobacco use disorder (3051), 3) Other and unspecified hyperlipidemia (2724), 4) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 5) Coronary atherosclerosis of native coronary artery (41401).

Definitions: **Chest pain:** A physical complaint that requires immediate diagnosis and evaluation. **Angina:** Pain, discomfort, or pressure localized in the chest that is caused by an insufficient supply of blood (ischemia) to the heart muscle. It is also sometimes characterized by a feeling of choking, suffocation, or crushing heaviness. **Aortic dissection:** A serious condition in which the inner layer of the aorta, the large blood vessel branching off the heart, tears. Blood surges through the tear, causing the inner and middle layers of the aorta to separate (dissect). **Hypertension:** High blood pressure. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body. **Hyperglycemia:** An abnormally high concentration of glucose in the circulating blood, seen especially in patients with diabetes mellitus. **Ischemia:** An insufficient supply of blood to an organ, usually due to a blocked artery.

Stomach, Esophageal & Duodenal Procedures (326-328)

Diagnoses: that frequently accompanied Stomach, Esophageal & Duodenal Procedures were: 1) Unspecified essential hypertension (4019), 2) Hypopotassemia (2768), 3) Acute posthemorrhagic anemia (2851), 4) Other and unspecified hyperlipidemia (2724).

Procedures: that frequently accompanied Stomach, Esophageal & Duodenal Procedures were: 1) Venous catheterization, not elsewhere classified (3893), 2) Transfusion of packed cells (9904), 3) Parenteral infusion of concentrated nutritional substances (9915), 4) Laparoscopic procedures for creation of esophagogastric sphincteric competence (4467), 5) Laparoscopic repair of diaphragmatic hernia, abdominal approach (5371).

Definitions: **Esophagus:** The musculomembranous passage extending from the pharynx to the stomach. **Duodenal:** Refers to the duodenum, or the first part of the small intestine. **Jejunum:** The middle part of the small intestine, connecting the duodenum and the ileum. **Ileum:** The lower-third distal portion of the small intestine, extending from the jejunum to the cecum. **Cecum:** A pouchlike structure or cul-de-sac constituting the first part of the large intestine. It is inferior to the junction of the ascending colon and joins the ileum, the last segment of the small intestine, at the ileocecal valve. **Pyloric sphincter:** A sphincter at the opening from the stomach into the duodenum. It is usually closed, opening only for a moment when a peristaltic wave passes over it. **Pyloric stenosis:** A narrowing of the pyloric sphincter at the outlet of the stomach, causing an obstruction that blocks the flow of food into the small intestine. **Pyloromyotomy:** Longitudinal incision through the anterior wall of the pyloric canal to the level of the submucosa, to treat hypertrophic pyloric stenosis. **Anastomosis:** A connection made surgically between adjacent blood vessels, parts of the intestine, or other channels of the body, or the operation in which this is constructed.

Major Small & Large Bowel Procedures (329-331)

Procedures: that frequently accompanied Major Small & Large Bowel Procedures were: 1) Other lysis of peritoneal adhesions (5459), 2) Other partial resection of small intestine (4562), 3) Open and other right hemicolectomy (4573), 4) Transfusion of packed cells (9904), 5) Open and other sigmoidectomy (4576), 6) Laparoscopic right hemicolectomy (1733), 7) Other small-to-large intestinal anastomosis (4593), 8) Laparoscopic sigmoidectomy (1736), 9) Colostomy, not otherwise specified (4610).

Definitions: **Sigmoidectomy:** Surgical removal of part or all of the sigmoid colon (usually to remove a malignant tumor). **Sigmoid colon:** The S-shaped part of the large intestine between the descending colon and rectum. **Hemicolectomy:** Surgical removal of the right or left side of the colon. **Excision:** Surgical removal by cutting. **Resection:** A procedure performed for the specific purpose of removal of a significant part of an organ or bodily structure; may be partial or complete. **Colostomy:** A surgical procedure where a portion of the large intestine is brought through the abdominal wall to carry stool out of the body. **Stoma:** An artificial opening between two cavities or canals, or between such and the surface of the body. **Lysis:** Destruction or decomposition, as of a cell or other substance, under influence of a specific agent. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs. **Anastomosis:** A connection made surgically between adjacent blood vessels, parts of the intestine, or other channels of the body, or the operation in which this is constructed.

Rectal Resection (332-334)

Procedures: that frequently accompanied Rectal Resection were: 1) Other anterior resection of rectum (4863), 2) Laparoscopic robotic assisted procedure (1742), 3) Rigid proctosigmoidoscopy (4823), 4) Transfusion of packed cells (9904).

Definitions: Resection: A procedure performed for the specific purpose of removal of a significant part of an organ or bodily structure; may be partial or complete.

Proctosigmoidoscopy: An examination of the rectum and the lower part of the colon using a thin, lighted instrument called a sigmoidoscope. **Transfusion:** Transfer of blood or a blood component from one person (donor) to another (recipient). **Anterior:** Denoting the front surface of the body; often used to indicate the position of one structure relative to another, that is, situated nearer the front part of the body. **Colostomy:** A surgical procedure where a portion of the large intestine is brought through the abdominal wall to carry stool out of the body. **Stoma:** An artificial opening between two cavities or canals, or between such and the surface of the body. **Lysis:** Destruction or decomposition, as of a cell or other substance, under influence of a specific agent. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs.

Comment: Rectal resections are performed to repair damage caused to the rectum by diseases of the lower intestinal tract.

Minor Small & Large Bowel Procedures (344-346)

Procedures: that frequently accompanied Minor Small & Large Bowel Procedures were: 1) Closure of stoma of large intestine (4652), 2) Venous catheterization, not elsewhere classified (3893), 3) Repair of pericostomy hernia (4642), 4) Other endoscopy of small intestine (4513), 5) Rigid proctosigmoidoscopy (4823), 6) Proctotomy (480).

Definitions: **Stoma:** An artificial opening between two cavities or canals, or between such and the surface of the body. **Transfusion:** Transfer of blood or a blood component from one person (donor) to another (recipient). **Catheterization:** The introduction of a catheter (a hollow flexible tube) into a body cavity or organ to inject or remove a fluid.

Sigmoidoscopy: A procedure in which a physician inserts a viewing tube (sigmoidoscope) into the rectum for the purpose of inspecting the lower colon and rectum. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs. **Colonoscopy:** A medical procedure where a long, flexible, tubular instrument called the colonoscope is used to view the entire inner lining of the colon (large intestine) and the rectum. **Proctosigmoidoscopy:** An examination of the rectum and the lower part of the colon using a thin, lighted instrument called a sigmoidoscope. **Proctotomy:** Incision into the rectum. Also called rectotomy.

Hernia Procedures Except Inguinal & Femoral (353-355)

Procedures: that frequently accompanied Hernia Procedures Except Inguinal & Femoral were: 1) Laparoscopic incisional hernia repair with graft or prosthesis (5362), 2) Other open umbilical herniorrhaphy (5349), 3) Other and open repair of umbilical hernia with graft or prosthesis (5341), 4) Continuous invasive mechanical ventilation for less than 96 consecutive hours (9671), 5) Other and open repair of other hernia of anterior abdominal wall with graft or prosthesis (5369).

Definitions: **Inguinal:** Of, relating to, or situated in the region of the groin. **Femoral:** Pertaining to the femur or to the thigh. **Hernia:** A general term used to describe a bulge or protrusion of an organ through the structure or muscle that usually contains it. **Gangrene:** Localized death and decomposition of body tissue, resulting from either obstructed circulation or bacterial infection. **Laparoscopy:** Examination or treatment of the interior of the abdomen by means of a laparoscope.

Gastrointestinal Hemorrhage (377-379)

Diagnoses: that frequently accompanied Gastrointestinal Hemorrhage were: 1) Unspecified essential hypertension (4019), 2) Diverticulosis of colon (without mention of hemorrhage) (56210), 3) Acute posthemorrhagic anemia (2851), 4) Tobacco use disorder (3051), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 6) Diaphragmatic hernia without mention of obstruction or gangrene (5533), 7) Other and unspecified hyperlipidemia (2724).

Definitions: **Hypertension:** High blood pressure. **Hemorrhage:** An escape of blood from the blood vessels, especially when excessive. **Diverticulosis:** The presence of diverticula in the absence of inflammation. **Diverticulitis:** Inflammation of a diverticulum, especially of the small pockets in the wall of the colon which fill with stagnant fecal material and become inflamed; rarely, they may cause obstruction, perforation, or bleeding. **Duodenum:** First part of the small intestine. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body. **Hyperglycemia:** An abnormally high concentration of glucose in the circulating blood, seen especially in patients with diabetes mellitus. **Anemia:** A condition marked by a deficiency of red blood cells or of hemoglobin in the blood, resulting in pallor and weariness; diminishes the capacity of the blood to carry oxygen.

Peptic Ulcer (380-384)

Diagnoses: that frequently accompanied Peptic Ulcer were: 1) Unspecified essential hypertension (4019), 2) Diaphragmatic hernia without mention of obstruction or gangrene (5533), 3) Acute posthemorrhagic anemia (2851), 4) Other and unspecified hyperlipidemia (2724).

Procedures: that frequently accompanied Peptic Ulcer were: 1) Esophagogastroduodenoscopy [EGD] with closed biopsy (4516), 2) Other endoscopy of small intestine (4513), 3) Transfusion of packed cells (9904), 4) Venous catheterization, not elsewhere classified (3893), 5) Endoscopic excision or destruction of lesion or tissue of esophagus (4233).

Definitions: Peptic ulcer: An ulcer of the upper digestive tract, usually in the stomach or duodenum, where the mucous membrane is exposed to gastric secretions. **Duodenum:** First part of the small intestine. **Duodenal ulcer:** An ulcer in the duodenum, or the first part of the small intestine. The most common type of peptic ulcer. **Hypertrophic pyloric stenosis:** Narrowing (stenosis) of the opening from the stomach to the first part of the small intestine known as the duodenum, due to enlargement (hypertrophy) of the muscle surrounding this opening (the pylorus, meaning "gate"), which spasms when the stomach empties. **Esophagogastroduodenoscopy:** A diagnostic procedure that allows the physician to diagnose and treat problems in the upper gastrointestinal (UGI) tract. The doctor uses a long, flexible, lighted tube called an endoscope.

Inflammatory Bowel Disease (385-387)

Diagnoses: that frequently accompanied Inflammatory Bowel Disease were: 1) Regional enteritis of unspecified site (5559), 2) Hypopotassemia (2768), 3) Unspecified essential hypertension (4019), 4) Tobacco use disorder (3051).

Procedures: that frequently accompanied Inflammatory Bowel Disease were: 1) Closed [endoscopic] biopsy of large intestine (4525), 2) Esophagogastroduodenoscopy [EGD] with closed biopsy (4516), 3) Transfusion of packed cells (9904), 4) Venous catheterization, not elsewhere classified (3893), 5) Closed [endoscopic] biopsy of rectum (4824).

Definitions: Inflammatory bowel disease: Ongoing inflammation of all or part of the digestive tract. **Colitis:** Inflammation of the colon. **Endoscopic biopsy:** A biopsy obtained by instruments passed through an endoscope or obtained by a needle introduced under endoscopic guidance. **Esophagogastroduodenoscopy:** A diagnostic procedure that allows the physician to diagnose and treat problems in the upper gastrointestinal (UGI) tract. The doctor uses a long, flexible, lighted tube called an endoscope.

Gastrointestinal Obstruction (388-390)

Diagnoses: that frequently accompanied Gastrointestinal Obstruction were: 1) Unspecified essential hypertension (4019), 2) Paralytic ileus (5601), 3) Dehydration (27651), 4) Hypopotassemia (2768), 5) Other and unspecified hyperlipidemia (2724), 6) Urinary tract infection, site not specified (5990), 7) Unspecified acquired hypothyroidism (2449).

Definitions: **Hypertension:** High blood pressure. **Dehydration:** Occurs when you use or lose more fluid than you take in, and your body doesn't have enough water and other fluids to carry out its normal functions. **Hernia:** A general term used to describe a bulge or protrusion of an organ through the structure or muscle that usually contains it.

Hypopotassemia: A deficiency of potassium in the blood. **Gastroenteritis:** Inflammation of the stomach and intestines, typically resulting from bacterial toxins or viral infection and causing vomiting and diarrhea. **Diverticulitis:** Inflammation of a diverticulum, especially of the small pockets in the wall of the colon which fill with stagnant fecal material and become inflamed; rarely, they may cause obstruction, perforation, or bleeding. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs.

Cholecystectomy - Nonlaparoscopic (411-416)

Procedures: that frequently accompanied Cholecystectomy - Nonlaparoscopic were: 1) Intraoperative cholangiogram (8753), 2) Venous catheterization, not elsewhere classified (3893), 3) Endoscopic sphincterotomy and papillotomy (5185), 4) Endoscopic removal of stone(s) from biliary tract (5188).

Definitions: Cholecystectomy nonlaparoscopic: (AKA conventional or open cholecystectomy) The gallbladder is removed through a surgical incision high in the right abdomen, just beneath the ribs. **Cholecystitis:** Inflammation of the gallbladder. **Cholangiogram:** A radiograph of the bile ducts made after the ingestion or injection of a radiopaque substance. **Sphincterotomy:** Incision or division of a sphincter muscle. **Cannulation:** Introduction of a cannula (a flexible tube) into a tube-like organ or body cavity.

Electrocautery: Cauterization of tissue by means of an electrode that consists of a red hot piece of metal, such as a wire, held in a holder, and is heated by either direct or alternating current. The term electrocautery is used to refer to both the procedure and the instrument used in the procedure. **Papillotomy:** A surgical incision in the papilla (a small cone shaped projection) of the duodenum (the beginning portion of the small intestine).

Cholecystectomy - Laparoscopic (417-419)

Procedures: that frequently accompanied Cholecystectomy - Laparoscopic were: 1) Intraoperative cholangiogram (8753), 2) Endoscopic sphincterotomy and papillotomy (5185), 3) Endoscopic removal of stone(s) from biliary tract (5188), 4) Laparoscopic lysis of peritoneal adhesions (5451), 5) Esophagogastroduodenoscopy [EGD] with closed biopsy (4516).

Definitions: **Laparoscope:** A usually rigid endoscope that is inserted through an incision in the abdominal wall and is used to examine visually the interior of the peritoneal cavity. **Cholecystectomy:** The surgical removal of the gallbladder. **Intraoperative:** Denotes that which occurs during an operation. **Cholangiogram:** A radiograph of the bile ducts made after the ingestion or injection of a radiopaque substance. **Sphincterotomy:** Incision or division of a sphincter muscle. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs. **Adhesiolysis:** Severing of adhesive band(s); done by laparoscopy or laparotomy. **Esophagogastroduodenoscopy:** A diagnostic procedure that allows the physician to diagnose and treat problems in the upper gastrointestinal (UGI) tract. The doctor uses a long, flexible, lighted tube called an endoscope. **Endoscope:** Medical device consisting of a long, thin, flexible (or rigid) tube which has a light and a video camera.

Cirrhosis & Alcoholic Hepatitis (432-434)

Diagnoses: that frequently accompanied Cirrhosis & Alcoholic Hepatitis were: 1) Ascites (7895), 2) Portal hypertension (5723), 3) Tobacco use disorder (3051), 4) Esophageal varices in diseases classified elsewhere, with bleeding (45620), 5) Unspecified essential hypertension (4019).

Definitions: **Cirrhosis:** A chronic degenerative disease in which normal liver cells are damaged and are then replaced by scar tissue. **Hepatitis:** Inflammation of the liver, due usually to viral infection but sometimes to toxic agents. **Portal hypertension:** Hypertension in the portal system as seen in cirrhosis of the liver and other conditions causing obstruction to the portal vein. **Hepatitis C:** A form of viral hepatitis caused by an RNA virus that is transmitted primarily by blood and blood products, as in blood transfusions or intravenous drug use, and sometimes through sexual contact. Most cases of non-A, non-B hepatitis are of this type. **Ascites:** The accumulation of fluid in the peritoneal cavity, causing abdominal swelling. **Esophageal varices:** Extremely dilated sub-mucosal veins in the lower third of the esophagus. They are most often a consequence of portal hypertension, commonly due to cirrhosis; patients with esophageal varices have a strong tendency to develop bleeding. **Hypertension:** High blood pressure.

Comment: The liver is the largest internal organ in the human body. The liver helps the body digest fats, stores reserves of nutrients, filters poisons and wastes from the blood, synthesizes proteins, and regulates the levels of many chemicals found in the bloodstream.

Hip & Femur Procedures Except Major Joint (480-482)

Procedures: that frequently accompanied Hip & Femur Procedures Except Major Joint were: 1) Open reduction of fracture with internal fixation, femur (7935), 2) Transfusion of packed cells (9904), 3) Closed reduction of fracture with internal fixation, femur (7915), 4) Internal fixation of bone without fracture reduction, femur (7855), 5) Venous catheterization, not elsewhere classified (3893), 6) Continuous invasive mechanical ventilation for less than 96 consecutive hours (9671), 7) Hemodialysis (3995).

Definitions: **Open reduction:** Realignment of a fractured bone after incision into the fracture site. **Closed reduction:** Therapeutic intervention whereby fractured bone is restored to normal alignment without surgical incision. **Internal fixation:** Any method of holding together the fragments of a fractured bone without the use of appliances external to the skin. After open reduction of the fracture, smooth or threaded pins, Kirschner wires, screws, plates attached by screws, or medullary nails may be inserted through an appropriate incision to stabilize the fragments. **Bone graft:** Surgery to place new bone or bone substitutes into spaces around a broken bone or bone defects. **Osteoclasis:** The intentional surgical fracture of a bone to correct a deformity. **Femur:** The thigh bone, extending from the pelvis to the knee; the longest and strongest bone in the body. **Transfusion:** Transfer of blood or a blood component from one person (donor) to another (recipient). **Arthrotomy:** Incision into a joint.

Back & Neck Procedures Except Spinal Fusion (490-491,518-520)

Procedures: that frequently accompanied Back & Neck Procedures Except Spinal Fusion were: 1) Other exploration and decompression of spinal canal (0309), 2) Excision of intervertebral disc (8051), 3) Other repair and plastic operations on spinal cord structures (0359), 4) Intra-operative neurophysiologic monitoring (0094), 5) Excision of lesion of other soft tissue (8339), 6) Removal of implanted devices from bone, other bones (7869).

Definitions: Exploration: An active examination, usually involving a surgical procedure, to ascertain conditions present within a body cavity as an aid in diagnosis.

Decompression: The removal of pressure.

Comment: Additional related procedures included, but are not limited to, spinal cord exploration, excision of a spinal cord lesion, vertebral fracture repair, and insertion of a spinal stimulator. The spinal cord is an extension of the brain. It is protected by a bony structure called the vertebral or spinal column. There is a wide space that surrounds the spinal cord. This space contains the cerebrospinal fluid. All the information going from the brain to the limbs travels through the spinal cord. This then allows for movement. The spinal cord is the first relay station for sensory information (what we feel in our arms and legs) on its way to consciousness in various centers of the brain.

Note: DRGs 490-491 were replaced with DRGs 518-520 by the Centers for Medicare & Medicaid Services (CMS) On 10/01/2014.

Medical Back Problems (551-552)

Diagnoses: that frequently accompanied Medical Back Problems were: 1) Unspecified essential hypertension (4019), 2) Other and unspecified hyperlipidemia (2724), 3) Tobacco use disorder (3051), 4) Closed fracture of lumbar vertebra without mention of spinal cord injury (8054), 5) Closed fracture of dorsal [thoracic] vertebra without mention of spinal cord injury (8052).

Definitions: **Vertebra:** Any of the bones or cartilaginous segments of the spinal column, usually 33 in number. **Intervertebral:** Located between vertebrae. **Myelopathy:** Any disease of the spinal cord. **Stenosis:** The abnormal narrowing of a passage in the body. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Fracture:** A break in bone or cartilage. Although usually a result of trauma, a fracture can be the result of an acquired disease of bone, such as osteoporosis, or of abnormal formation of bone in a congenital disease of bone, such as osteogenesis imperfecta ('brittle bone disease'). **Dorsal:** Denoting a position more toward the back surface than some other object of reference; a synonym of posterior in human anatomy. **Hypertension:** High blood pressure.

Comment: Diagnoses under this DRG, include but are not limited to, displacement of lumbar intervertebral disc without myelopathy, spinal stenosis, lumbago, closed fracture of dorsal vertebra and closed fracture of lumbar vertebra. It's interesting that persons with this diagnosis, as well as many other medical problems throughout this book, commonly have a diagnosis of tobacco use.

Mastectomy For Malignancy (582-583)

Procedures: that frequently accompanied Mastectomy For Malignancy were: 1) Insertion of breast tissue expander (8595), 2) Unilateral extended simple mastectomy (8543), 3) Other mammoplasty (8589), 4) Unilateral simple mastectomy (8541), 5) Bilateral extended simple mastectomy (8544), 6) Bilateral simple mastectomy (8542), 7) Latissimus dorsi myocutaneous flap (8571).

Definitions: **Mastectomy:** Surgical removal of all or part of a breast, sometimes including excision of the underlying pectoral muscles and regional lymph nodes, usually performed as a treatment for cancer. **Malignancy:** Cancerous cells that have the ability to spread to other sites in the body (metastasize) or to invade nearby (locally) and destroy tissues. **Catheterization:** The introduction of a catheter (a hollow flexible tube) into a body cavity or organ to inject or remove a fluid. **Excision:** Surgical removal by cutting. **Axillary lymph nodes:** Numerous nodes around the axillary veins that receive the lymphatic drainage from the upper limb, scapular region, and pectoral region (including mammary glands); they drain into the subclavian trunk. **Biopsy:** An examination of tissue removed from a living body to discover the presence, cause, or extent of a disease. **Mammoplasty:** Any reconstructive or cosmetic surgical procedure that alters the size or shape of the breast.

Operating Room Procedures For Obesity (619-621)

Procedures: that frequently accompanied Operating Room Procedures For Obesity were: 1) Laparoscopic vertical (sleeve) gastrectomy (4382), 2) Laparoscopic repair of diaphragmatic hernia, abdominal approach (5371), 3) Other endoscopy of small intestine (4513), 4) Laparoscopic gastroenterostomy (4438), 5) Laparoscopic gastric restrictive procedure (4495), 6) Laparoscopic liver biopsy (5014), 7) Laparoscopic lysis of peritoneal adhesions (5451).

Definitions: **Laparoscopy:** Examination or treatment of the interior of the abdomen by means of a laparoscope. **Gastroenterostomy:** The surgical creation of a connection between the stomach and the jejunum. **Jejunum:** The middle part of the small intestine, connecting the duodenum and the ileum. **Duodenum:** First part of the small intestine. **Ileum:** The lower-third distal portion of the small intestine, extending from the jejunum to the cecum. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs. **Adhesiolysis:** Severing of adhesive band(s); done by laparoscopy or laparotomy. **Diaphragmatic hernia:** Protrusion of some of the contents of the abdomen through an opening in the diaphragm and into the chest cavity. **Gastroplasty:** A surgical procedure that alters the shape of the stomach with the intent of altering the flow of gastric content.

Diabetes (637-639)

Diagnoses: that frequently accompanied Diabetes were: 1) Unspecified essential hypertension (4019), 2) Acute kidney failure, unspecified (5849), 3) Long-term (current) use of insulin (V5867), 4) Tobacco use disorder (3051), 5) Dehydration (27651), 6) Other and unspecified hyperlipidemia (2724), 7) Hyposmolality and/or hyponatremia (2761).

Definitions: **Hypertension:** High blood pressure. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Hyposmolality:** The condition especially of a bodily fluid of having abnormally low osmolality. **Osmolality:** The concentration of a solution expressed as the total number of solute particles per kilogram. **Ketoacidosis:** A life-threatening problem that affects people with diabetes. It occurs when the body cannot use sugar (glucose) as a fuel source because there is no insulin or not enough insulin. Fat is used for fuel instead. When fat breaks down, waste products called ketones build up in the body.

Comment: Diabetes is a disease in which blood sugar (glucose) levels are abnormally high because the body does not produce enough insulin. In Type 1 diabetes more than 90% of the insulin-producing cells of the pancreas are permanently destroyed. The pancreas produces little or no insulin. Most people who have Type 1 diabetes develop the disease before age 30. In Type 2 diabetes, the pancreas continues to produce insulin, sometimes even at higher than normal levels. However, the body develops resistance to the effects of insulin, so there is not enough insulin to meet the body's needs. Type 2 diabetes may occur in children and adolescents but usually begins in people older than 30 and becomes progressively more common with age.

Endocrine Disorders (643-645)

Diagnoses: that frequently accompanied Endocrine Disorders were: 1) Unspecified essential hypertension (4019), 2) Unspecified acquired hypothyroidism (2449), 3) Hypopotassemia (2768), 4) Other disorders of neurohypophysis (2536), 5) Tobacco use disorder (3051).

Definitions: **Hypertension:** High blood pressure. **Hypothyroidism:** Diminished production of thyroid hormone, leading to clinical manifestations of thyroid insufficiency, including low metabolic rate, tendency to gain weight, somnolence, and sometimes myxedema. **Hypopotassemia:** A deficiency of potassium in the blood. **Neurohypophysis:** The posterior lobe of the pituitary gland. It stores and secretes two hormones, oxytocin and antidiuretic hormone (vasopressin), which are released in response to neural stimulation.

Kidney & Ureter Procedures For Neoplasm (656-658)

Procedures: that frequently accompanied Kidney & Ureter Procedures For Neoplasm were: 1) Nephroureterectomy (5551), 2) Laparoscopic robotic assisted procedure (1742), 3) Partial nephrectomy (554).

Definitions: **Ureter:** The tube that carries urine from the kidney to the bladder, with each kidney having one ureter. **Neoplasm:** An abnormal tissue that grows by cellular proliferation more rapidly than normal and continues to grow after the stimuli that initiated the new growth cease. Neoplasms show partial or complete lack of structural organization and functional coordination with the normal tissue, and usually form a distinct mass of tissue that may be either benign (benign tumor) or malignant (cancer). **Kidney:** Either of the two bean-shaped organs in the lumbar region that filter the blood, excreting the end-products of body metabolism in the form of urine, and regulating the concentrations of hydrogen, sodium, potassium, phosphate, and other ions in the extracellular fluid. **Bladder:** A distensible musculomembranous organ serving as a receptacle for fluid, such as the urinary bladder or gallbladder. **Secondary malignant neoplasm:** Cancerous tumor, or abnormal cell growth which has metastasized (transferred) from one part (or organ) of the body to another organ or part of the body. **Urinary organs:** The organs of the body that produce, store, and discharge urine. These organs include the kidneys, ureters, bladder, and urethra. **Nephroureterectomy:** Surgical removal of a kidney and its ureter.

Kidney And Ureter Procedures For Non-Neoplasm (659-661)

Procedures: that frequently accompanied Kidney And Ureter Procedures For Non-Neoplasm were: 1) Percutaneous nephrostomy without fragmentation (5503), 2) Percutaneous pyelogram (8775), 3) Ureteral catheterization (598), 4) Nephrostomy (5502), 5) Replacement of nephrostomy tube (5593), 6) Correction of ureteropelvic junction (5587), 7) Retrograde pyelogram (8774).

Definitions: **Percutaneous:** Performed through the skin. **Percutaneous nephrostomy:** The insertion of a catheter through the skin and body wall into the kidney pelvis, mainly to provide urine drainage where the ureter is not functional. It is used also to remove or dissolve renal calculi and to diagnose ureteral obstruction. **Catheterization:** The introduction of a catheter (a hollow flexible tube) into a body cavity or organ to inject or remove a fluid. **Pyelogram:** A radiographic picture of the kidneys and ureters taken after the IV or intraureteral injection of a radiopaque contrast medium. It shows the size and location of the kidneys, the outline of the ureters and bladder, the filling of the renal pelvis, the patency of the urinary tract, and any cysts or tumors within the kidneys. **Cystoscopy:** A diagnostic procedure that is used to look at the bladder (lower urinary tract), collect urine samples, and examine the prostate gland. Performed with an optic instrument known as a cystoscope (urethroscope), this instrument uses a lighted tip for guidance to aid in diagnosing urinary tract disease and prostate disease. Performed by a urologist, this surgical test also enables biopsies to be taken or small stones to be removed by way of a hollow channel in the cystoscope. **Nephroureterectomy:** Surgical removal of a kidney and its ureter. **Ureteropelvic junction:** Site of origin of the ureter from the renal pelvis, a common location for congenital or acquired obstruction.

Prostatectomy (665-667)

Procedures: that frequently accompanied Prostatectomy were: 1) Other transurethral prostatectomy (6029), 2) Transurethral clearance of bladder (570), 3) Other transurethral excision or destruction of lesion or tissue of bladder (5749), 4) Other cystoscopy (5732), 5) Transfusion of packed cells (9904).

Definitions: Prostatectomy: Surgical removal of all or part of the prostate gland. **Percutaneous:** Performed through the skin. **Excision:** Surgical removal by cutting. **Catheterization:** The introduction of a catheter (a hollow flexible tube) into a body cavity or organ to inject or remove a fluid. **Pyelogram:** A radiographic picture of the kidneys and ureters taken after the IV or intraureteral injection of a radiopaque contrast medium. It shows the size and location of the kidneys, the outline of the ureters and bladder, the filling of the renal pelvis, the patency of the urinary tract, and any cysts or tumors within the kidneys. **Cystoscopy:** A diagnostic procedure that is used to look at the bladder (lower urinary tract), collect urine samples, and examine the prostate gland. Performed with an optic instrument known as a cystoscope (urethroscope), this instrument uses a lighted tip for guidance to aid in diagnosing urinary tract disease and prostate disease. Performed by a urologist, this surgical test also enables biopsies to be taken or small stones to be removed by way of a hollow channel in the cystoscope. **Ureterostomy:** The creation of a stoma (a new, artificial outlet) for a ureter or kidney. The procedure is performed to divert the flow of urine away from the bladder when the bladder is not functioning or has been removed.

Renal Failure (682-684)

Diagnoses: that frequently accompanied Renal Failure were: 1) Hypertensive chronic kidney disease, unspecified, with chronic kidney disease stage V or end stage renal disease (40391), 2) Congestive heart failure, unspecified (4280), 3) Dehydration (27651), 4) Unspecified essential hypertension (4019), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 6) Hyperpotassemia (2767), 7) Tobacco use disorder (3051).

Definitions: **Dehydration:** Occurs when you use or lose more fluid than you take in, and your body doesn't have enough water and other fluids to carry out its normal functions. **Hypertension:** High blood pressure. **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body. **Hyperglycemia:** An abnormally high concentration of glucose in the circulating blood, seen especially in patients with diabetes mellitus. **Hyperpotassemia:** An abnormally high potassium concentration in the blood, most often due to defective renal excretion.

Comment: The kidneys are two fist-sized organs located on each side of the spine at the bottom of the rib cage and slightly above the waist. Renal failure is the inability of the kidneys to excrete wastes, concentrate urine and conserve electrolytes. The condition may be acute or chronic. In chronic kidney disease, the kidneys have not stopped working altogether but are not working as well as they should. Acute renal failure occurs when the kidneys stop working over a period of hours, days or in some cases, weeks. When acute renal failure occurs, wastes and excess waste products and excess water build up in the body which upsets the body's normal chemical balance. Substances that are normally needed for the body to function properly become poisonous to the body when they reach abnormally high levels.

Admit For Renal Dialysis (685)

Diagnoses: that frequently accompanied Admit For Renal Dialysis were: 1) End stage renal disease (5856), 2) Encounter for extracorporeal dialysis (V560), 3) Hypertensive chronic kidney disease, unspecified, with chronic kidney disease stage V or end stage renal disease (40391), 4) Anemia in chronic kidney disease (28521).

Definitions: Dialysis: The process of removing waste products and excess fluid from the body. Dialysis is necessary when the kidneys are not able to adequately filter the blood.

Hemodialysis: A method of mechanically cleansing the blood outside of the body, in order to remove various substances that would normally be cleared by the kidneys.

Perfusion: The injection of fluid into a blood vessel in order to reach an organ or tissues, usually to supply nutrients and oxygen. **Transfusion:** Transfer of blood or a blood component from one person (donor) to another (recipient).

Comment: The kidneys are two fist-sized organs located on each side of the spine at the bottom of the rib cage and slightly above the waist. Renal failure is the inability of the kidneys to excrete wastes, concentrate urine and conserve electrolytes. The condition may be acute or chronic. In chronic kidney disease, the kidneys have not stopped working altogether but are not working as well as they should. Acute renal failure occurs when the kidneys stop working over a period of hours, days or in some cases, weeks. When acute renal failure occurs, wastes and excess waste products and excess water build up in the body which upsets the body's normal chemical balance. Substances that are normally needed for the body to function properly become poisonous to the body when they reach abnormally high levels.

Kidney & Urinary Tract Neoplasms (686-688)

Diagnoses: that frequently accompanied Kidney & Urinary Tract Neoplasms were: 1) Malignant neoplasm of kidney, except pelvis (1890), 2) Malignant neoplasm of bladder, part unspecified (1889), 3) Secondary malignant neoplasm of other urinary organs (1981).

Definitions: **Malignant:** Tending to become worse and end in death. **Neoplasm:** An abnormal tissue that grows by cellular proliferation more rapidly than normal and continues to grow after the stimuli that initiated the new growth cease. Neoplasms show partial or complete lack of structural organization and functional coordination with the normal tissue, and usually form a distinct mass of tissue that may be either benign (benign tumor) or malignant (cancer). **Kidney:** Either of the two bean-shaped organs in the lumbar region that filter the blood, excreting the end-products of body metabolism in the form of urine, and regulating the concentrations of hydrogen, sodium, potassium, phosphate, and other ions in the extracellular fluid. **Bladder:** A distensible musculomembranous organ serving as a receptacle for fluid, such as the urinary bladder or gallbladder. **Secondary malignant neoplasm:** Cancerous tumor, or abnormal cell growth which has metastasized (transferred) from one part (or organ) of the body to another organ or part of the body. **Urinary organs:** The organs of the body that produce, store, and discharge urine. These organs include the kidneys, ureters, bladder, and urethra. **Transfusion:** Transfer of blood or a blood component from one person (donor) to another (recipient). **Packed cells:** A preparation of blood cells separated from liquid plasma, often administered in severe anemia to restore adequate levels of hemoglobin and red blood cells without overloading the vascular system with excess fluids. **Needle biopsy:** Any method in which the specimen for biopsy is removed by aspirating it through an appropriate needle or trocar that pierces the skin, or the external surface of an organ, and into the underlying tissue to be examined. **Percutaneous:** Performed through the skin.

Kidney And Urinary Tract Infections (689-690)

Diagnoses: that frequently accompanied Kidney And Urinary Tract Infections were: 1) Urinary tract infection, site not specified (5990), 2) Unspecified essential hypertension (4019), 3) Other and unspecified hyperlipidemia (2724), 4) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 5) Hypopotassemia (2768), 6) Acute pyelonephritis with lesion of renal medullary necrosis (59011), 7) Tobacco use disorder (3051).

Definitions: **Urinary tract:** All organs and ducts involved in the secretion and elimination of urine from the body. Also called urinary system. **Hyperpotassemia:** An abnormally high potassium concentration in the blood, most often due to defective renal excretion. **Kidney:** Either of the two bean-shaped organs in the lumbar region that filter the blood, excreting the end-products of body metabolism in the form of urine, and regulating the concentrations of hydrogen, sodium, potassium, phosphate, and other ions in the extracellular fluid. **Bladder:** A distensible musculomembranous organ serving as a receptacle for fluid, such as the urinary bladder or gallbladder. **Urethra:** The canal leading from the bladder, discharging the urine externally. **Pyelonephritis:** Inflammation of the kidney and its pelvis due to bacterial infection. **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body. **Lesion:** Any abnormal change involving any tissue or organ due to disease or injury. **Renal:** Relating to, involving, affecting, or located in the region of the kidneys. **Medullary:** Referring to or resembling the medulla or centre of a tissue, especially the bone marrow. **Necrosis:** Death of cells or tissues through injury or disease, especially in a localized area of the body. **Abscess:** An enclosed collection of liquefied tissue, known as pus, somewhere in the body.

Urinary Stones (691-694)

Diagnoses: that frequently accompanied Urinary Stones were: 1) Calculus of ureter (5921), 2) Calculus of kidney (5920), 3) Tobacco use disorder (3051), 4) Hydronephrosis (591), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 6) Leukocytosis, unspecified (28860), 7) Pyelonephritis, unspecified (59080).

Definitions: **Calculus:** An abnormal concretion in the body, usually formed of mineral salts and most commonly found in the gallbladder, kidney, or urinary bladder. Also called stone. **Ureter:** The tube that carries urine from the kidney to the bladder, with each kidney having one ureter. **Kidney:** Either of the two bean-shaped organs in the lumbar region that filter the blood, excreting the end-products of body metabolism in the form of urine, and regulating the concentrations of hydrogen, sodium, potassium, phosphate, and other ions in the extracellular fluid. **Bladder:** A distensible musculomembranous organ serving as a receptacle for fluid, such as the urinary bladder or gallbladder. **Urethra:** The canal leading from the bladder, discharging the urine externally. **Extracorporeal shockwave lithotripsy (ESWL):** Uses highly focused impulses projected and focused from outside the body to pulverize kidney stones anywhere in the urinary system. The stone usually is reduced to sand-like granules that can be passed in the patient's urine. **Ultrasonic lithotripsy:** Uses high frequency sound waves delivered through an electronic probe inserted into the ureter to break up the kidney stone. The fragments are passed by the patient or removed surgically. **Pyeloscopy:** Fluoroscopic observation of the pelvis and calyces of the kidney and the ureter, after the injection through the ureter of a radiopaque solution.

Cesarean Section With Complications (765)

Procedures: that frequently accompanied Cesarean Section With Complications were: 1) Low cervical cesarean section (741), 2) Application or administration of an adhesion barrier substance (9977), 3) Medical induction of labor (734), 4) Other bilateral ligation and division of fallopian tubes (6632), 5) Administration of diphtheria-tetanus-pertussis, combined (9939), 6) Other bilateral destruction or occlusion of fallopian tubes (6639), 7) Other vacuum extraction (7279), 8) Other fetal monitoring (7534), 9) Other artificial rupture of membranes (7309), 10) Transfusion of packed cells (9904).

Definitions: **Antepartum:** Occurring in the period before childbirth. **Cesarean section:** A surgical procedure in which incisions are made through a woman's abdomen and uterus to deliver her baby. **Fallopian tube:** Either of the pair of tubes that carry the eggs from the ovary to the uterus called also uterine tube. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs. **Adhesiolysis:** Severing of adhesive band(s); done by laparoscopy or laparotomy.

Comment: Common diagnoses associated with this procedure (listed in order of frequency) were: Mother had a previous cesarean delivery (65421), anemia (2859), abnormality in fetal heart rate or rhythm (65971), early onset of delivery (64421), advanced maternal age (65961), sterilization (V252).

Cesarean Section Without Complications (766)

Procedures: that frequently accompanied Cesarean Section Without Complications were: 1) Low cervical cesarean section (741), 2) Application or administration of an adhesion barrier substance (9977), 3) Medical induction of labor (734), 4) Other bilateral ligation and division of fallopian tubes (6632), 5) Other bilateral destruction or occlusion of fallopian tubes (6639), 6) Administration of diphtheria-tetanus-pertussis, combined (9939), 7) Other vacuum extraction (7279), 8) Other artificial rupture of membranes (7309), 9) Other fetal monitoring (7534), 10) Prophylactic vaccination against influenza (9952).

Definitions: **Antepartum:** Occurring in the period before childbirth. **Cesarean section:** A surgical procedure in which incisions are made through a woman's abdomen and uterus to deliver her baby. **Fallopian tube:** Either of the pair of tubes that carry the eggs from the ovary to the uterus called also uterine tube. **Peritoneum:** The serous membrane lining the cavity of the abdomen and covering the abdominal organs. **Adhesiolysis:** Severing of adhesive band(s); done by laparoscopy or laparotomy.

Comment: Common diagnoses associated with this procedure (listed in order of frequency) were: Mother had a previous cesarean delivery (65421), abnormality in fetal heart rate or rhythm (65971), sterilization (V252), cord entanglement (66331), elderly with previous pregnancy (65961), early onset delivery (64421), breach delivery (65221).

Vaginal Delivery With Complicating Diagnoses (774)

Procedures: that frequently accompanied Vaginal Delivery With Complicating Diagnoses were: 1) Other manually assisted delivery (7359), 2) Repair of other current obstetric laceration (7569), 3) Medical induction of labor (734), 4) Other artificial rupture of membranes (7309), 5) Administration of diphtheria-tetanus-pertussis, combined (9939), 6) Episiotomy (736), 7) Manual removal of retained placenta (754), 8) Other vacuum extraction (7279), 9) Prophylactic vaccination against influenza (9952), 10) Other fetal monitoring (7534).

Definitions: **Antepartum:** Occurring in the period before childbirth. **Vaginal delivery:** The birth of a fetus through the vagina. **Laceration:** A wound produced by the tearing of body tissue, as distinguished from a cut or incision. **Episiotomy:** A surgical incision made in the area between the vagina and anus (perineum). This is done during the last stages of labor and delivery to expand the opening of the vagina to prevent tearing during the delivery of the baby. **Perineum:** The mucocutaneous tissue between the posterior scrotum or vagina and the anal sphincter.

Comment: Common diagnoses associated with this procedure (listed in order of frequency) were: Perineal laceration, rupture, or tear involving: fourchette, hymen, labia, skin, vagina, vulva, pelvic floor, perineal muscles, vaginal muscles, (66401, 4, 11), cord entanglement (66331), abnormality in fetal heart rate or rhythm (6597), other specified infectious and parasitic diseases (6478), early onset delivery (64221).

Vaginal Delivery Without Complicating Diagnoses (775)

Procedures: that frequently accompanied Vaginal Delivery Without Complicating Diagnoses were: 1) Other manually assisted delivery (7359), 2) Repair of other current obstetric laceration (7569), 3) Other artificial rupture of membranes (7309), 4) Medical induction of labor (734), 5) Episiotomy (736), 6) Administration of diphtheria-tetanus-pertussis, combined (9939), 7) Other vacuum extraction (7279), 8) Other fetal monitoring (7534), 9) Prophylactic vaccination against influenza (9952), 10) Induction of labor by artificial rupture of membranes (7301).

Definitions: **Antepartum:** Occurring in the period before childbirth. **Vaginal delivery:** The birth of a fetus through the vagina. **Laceration:** A wound produced by the tearing of body tissue, as distinguished from a cut or incision. **Episiotomy:** A surgical incision made in the area between the vagina and anus (perineum). This is done during the last stages of labor and delivery to expand the opening of the vagina to prevent tearing during the delivery of the baby. **Perineum:** The mucocutaneous tissue between the posterior scrotum or vagina and the anal sphincter.

Comment: Diagnoses included in this procedure include, but are not limited to, normal delivery, drug dependence-delivered, twin pregnancy-delivered, premature rupture of membranes-delivered, breech presentation-delivered, maternal stress-delivered, and cord prolapse-delivered. Common diagnoses associated with this DRG (listed in order of frequency) are: Perineal laceration, rupture, or tear involving: fourchette, hymen, labia, skin, vagina, vulva, pelvic floor, perineal muscles, vaginal muscles, (66401, 4, 11), cord entanglement (66331), pregnancy over 40 completed weeks to 42 completed weeks gestation (6451).

Prematurity With Major Problems (791)

Diagnoses: that frequently accompanied Prematurity With Major Problems were: 1) Need for prophylactic vaccination and inoculation against viral hepatitis (V053), 2) Neonatal jaundice associated with preterm delivery (7742), 3) Other respiratory problems after birth (77089), 4) Observation for suspected infectious condition (V290), 5) Anemia of prematurity (7766), 6) Ostium secundum type atrial septal defect (7455), 7) Septicemia [sepsis] of newborn (77181).

Definitions: **Liveborn:** An infant who shows evidence of life after birth; life is considered to be present after birth if any one of the following is observed: 1) the infant breathes; 2) the infant shows beating of the heart; 3) pulsation of the umbilical cord occurs; or 4) definite movement of voluntary muscles occurs. **Cesarean section:** A surgical procedure in which incisions are made through a woman's abdomen and uterus to deliver her baby. **Jaundice:** A medical condition with yellowing of the skin or whites of the eyes, arising from excess of the pigment bilirubin and typically caused by obstruction of the bile duct, by liver disease, or by excessive breakdown of red blood cells. **Septicemia:** Systemic disease caused by the spread of microorganisms and their toxins through circulating blood; formerly called "blood poisoning". **Infusion:** The introduction of a substance, such as a fluid, electrolyte, nutrient, or drug, directly into a vein or interstitially by means of gravity flow. **Endotracheal tube:** A tube inserted (as through the nose or mouth) into the trachea to maintain an unobstructed passageway especially to deliver oxygen or anesthesia to the lungs-called also breathing tube.

Normal Newborn (795)

Procedures: that frequently accompanied Normal Newborn were: 1) Prophylactic administration of vaccine against other diseases (9955), 2) Circumcision (640), 3) Audiometry (9541), 4) Hearing examination, not otherwise specified (9547), 5) Other phototherapy (9983), 6) Other nonoperative neurologic function tests (8915).

Comment: On average, birth weights range from five pounds five ounces to eight pounds. The pulse of a newborn ranges from 100 to 170 beats per minute when awake, 70 to 80 when sleeping deeply. They take an average of 30 to 50 breaths per minute. Nearly all fair-skinned babies are born with blue or gray eyes, which may gradually change color over the first 12 months. Darker-skinned babies most often are born with brown or darker eyes, which usually stay that color. Dark-haired babies usually stay that way, but blond hair often darkens with age. Newborn babies have a soft spot, also known as the fontanel, that is diamond shaped just above the hairline, where the baby's skull bones have not yet fused together.

Postoperative Or Post-Traumatic Infections (856-858,862-863)

Diagnoses: that frequently accompanied Postoperative Or Post-Traumatic Infections were: 1) Other postoperative infection (99859), 2) Unspecified essential hypertension (4019), 3) Hyposmolality and/or hyponatremia (2761), 4) Other and unspecified hyperlipidemia (2724), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 6) Anemia, unspecified (2859), 7) Tobacco use disorder (3051).

Definitions: **Postoperative:** Referring to the time period after an operation or surgical procedure. **Hypertension:** High blood pressure. **Diabetes mellitus:** A condition in which the pancreas no longer produces enough insulin or cells stop responding to the insulin that is produced, so that glucose in the blood cannot be absorbed into the cells of the body.

Hyposmolality: The condition especially of a bodily fluid of having abnormally low osmolality. **Osmolality:** The concentration of a solution expressed as the total number of solute particles per kilogram. **Hyperlipidemia:** An abnormally high concentration of fats or lipids in the blood. **Percutaneous:** Performed through the skin. **Subcutaneous:** Beneath the skin. **Excise:** To remove by cutting. **Debridement:** The medical removal of dead, damaged, or infected tissue to improve the healing potential of the remaining healthy tissue.

Septicemia Or Severe Sepsis (870-872)

Diagnoses: that frequently accompanied Septicemia Or Severe Sepsis were: 1) Acute respiratory failure (51881), 2) Septic shock (78552), 3) Acute kidney failure, unspecified (5849), 4) Pneumonia, organism unspecified (486), 5) Acidosis (2762), 6) Urinary tract infection, site not specified (5990).

Definitions: **Septicemia:** Systemic disease caused by the spread of microorganisms and their toxins through circulating blood; formerly called "blood poisoning". **Septic shock:** A serious condition that occurs when a body-wide infection leads to dangerously low blood pressure. **Acidosis:** The accumulation of acid and hydrogen ions or depletion of the alkaline reserve (bicarbonate content) in the blood and body tissues, resulting in a decrease in pH.

Traumatic Injury (913-914)

Diagnoses: that frequently accompanied Traumatic Injury were: 1) Unspecified essential hypertension (4019), 2) Head injury, unspecified (95901), 3) Acute respiratory failure (51881), 4) Angioneurotic edema, not elsewhere classified (9951).

Definitions: **Trauma:** An injury, physical or mental. **Hypertension:** High blood pressure. **Closure of skin and subcutaneous tissue:** Suture or stitches used to close the injured tissue surrounding the wound.

Poisoning & Toxic Effects Of Drugs (917-918)

Diagnoses: that frequently accompanied Poisoning & Toxic Effects Of Drugs were: 1) Tobacco use disorder (3051), 2) Depressive disorder, not elsewhere classified (311), 3) Unspecified essential hypertension (4019), 4) Altered mental status (78097), 5) Poisoning by benzodiazepine-based tranquilizers (9694), 6) Anxiety state, unspecified (30000), 7) Hypopotassemia (2768), 8) Poisoning by aromatic analgesics, not elsewhere classified (9654), 9) Suicidal ideation (V6284).

Definitions: **Hypertension:** High blood pressure. **Psychotropic:** Exerting an effect on the mind; capable of modifying mental activity; said especially of drugs. **Hypopotassemia:** A deficiency of potassium in the blood. **Bipolar disorder:** Previously referred to as manic depressive illness, characterized by the occurrence of mania (euphoria) alternating with bouts of depression.

Comment: Poisoning is a condition produced by the ingestion of, injection of, inhalation of, or exposure to a poisonous substance. According to the Center for Disease Control and Prevention, a poisoning is a poison exposure that results in bodily harm. Poison exposures can occur by accident without intent, these exposures are defined as unintentional poisonings. Poison exposures can be the result of a conscious, willful decision, defined as intentional poisonings. Identification of the poison and presentation of a container label are critical to diagnosis and treatment.
